# DRAKKHEN

You have at night. The stars guide you. Never  
Magic is going to die.

Faces and bodies are transmogrifying... or

The island spreads its evil tentacles,

Soon, the old world will disappear,

You must prevent the prophecy

before it is fulfilled.

Magic, it is the life of our world,

The Emperor has told you :

"If you fail, don't come back."

## contents

### NEWS & REVIEWS

All the latest happenings in the electronic world of computers ... including some brand-new shots of *Medusa 2*.

### F16

#### REVIEWS

Frontiers get the star treatment this month. Over 80 games featured with reviews of Star Pilots and Top Blowers. So many games that we've had to split the review section. Part two starts on page 77 with loads of comedy reviews. There's even a stop press review of *Die Hard*, featured on the month's cover, on page 10.

### 64

#### PLAYING TIPS

Mr Hell gets the full map treatment this month. Furthermore, F16 gets the Star Tip accolade.

There's also a 100% 3D feature chart to live large, the last part of the *Frontier* collection and loads more features, the highlights on three strategies that as well as some hot news on forthcoming games.

### 160

#### CD-ROM IN JAPAN

Whirlwind Komodo goes from internet and sat down to play the latest console games. This month there's more news on the Super Geek column and some very exciting British news.

### 192

#### ADVENTURE & STRATEGY & ROLEPLAY

Electronic Arts' *Kill The Thief* gets a 100% Golden Snail this month. There's also plenty of room for the most comprehensive AIDS news guide around today.

### 84

#### SHOW WHITE AND STUDIO CRYSTAL

Michael Haydon looks at one possible future world for F16 racers as he visits the massive EPCOT centre at Disneyworld in America.

### 85

#### EDUCATIONAL PROGRAMME

Your quarterly eight-page column in American Weekly. Written, designed and researched totally within the UK, this is the definitive guide to overseas action from the largest computer-writing publication in the world. This issue contains an exclusive interview with the designers

of Star's *Lyra HandBook* and **MORE** information and pictures on Activision's *Ice Hand*.

### 92

#### MASTERS OF STRATEGY

Paul Pley gives the latest intelligence and sounds news of Activision's up-and-coming line of strategy games for ALL FORMATS.

### 94

**THE SEARCH FOR CHRISTMAS SPIRIT**  
In the first part, find out if The Games Machine crew found the Christmas spirit they were looking for.

### 49

#### THE PUBLISHERS

In Christmas sponsorship, there's less time to bid any more presents. But, there's one thing that every game designer can never have too many of: royalties. The Games Masters team take over all royalties and put them through their paces. There's also news of an innovative foot pedal from Eurodata...

### 49

#### F16 Return! Test!

Midweek knows how easy and relatively cheap it is to grab and chop pictures. But did you know that it's even cheaper — and a lot easier — to digitise your *Frontier* models? Whether they're from CG3, model, video or the

speech, there's nothing to stop you from saying "I'm having that!"... over and over again.

### 52

#### PC SOUND CARDS

Don't take the risk, buy the PC universe. Not only has it got some great graphics boards, it also has some better-than-average sound cards. Turn to page 52 and experience the reality of professional PC sound.

### 54

#### READER PAGE

Published in case you've missed the main reviews this month, Readerpage is not just for people who read in on *One* news. And if that leaves you to scratch, try solving *Frontier's* *Prize Quiz*.

# NO MERCY-NO SURRENDER

A NEW 3D DUO FROM LOGOTRON ENTERTAINMENT

## BAD COMPANY...

**Y**ou're taken into Bad Company. In this game there are no good guys, just you, your soldiers and wave upon wave of insectoid enemies who have put one thing in mind - the total destruction of humanity. They will leave nothing but bug messes. No quarter is given and none is given, you know when to do it's all or nothing.

Bad Company is programming legend Steve Ballo's latest and greatest masterpiece, with a wealth of interesting point perspective surfaces, the latest superfast 3D engine techniques and technology.

- Seven different third person option
- Unique combination of weaponry, with the power boosters
- Choice of eight different combat modes
- Unprecedented variety of alienizing insectoid attack

ACADEMY OF COMMENDABLE ARMS  
END NOVEMBER 91. PRICE £34.99

## STAR-BLAZE...

**S**tarBlaze is pure acid action 3D shoot 'em up from the programmers that brought you the cult classic Starblaster. In an intergalactic war of unprecedented intensity, you must prove your prowess by holding off hordes of rampaging alien attack waves and live to tell the tale. How will you do it? With quick reactions and the fastest trigger on the planet!

StarBlaze is a game which draws upon the strongest features of the classic space-shooters to introduce a wholly original style of game to the arcade genre, featuring:

- Over 1000 different alien attack patterns
- All four-axised gyroscopic aiming system
- True colour graphics (800x600)
- Seven, smart, friendly and heroic power packages

ACADEMY OF COMMENDABLE ARMS  
END OCTOBER 91. PRICE £34.99

STUFF THAT HAPPENED — STUFF THAT WILL

## '16-Bit games? To you, guv, a fiver'

Not on the books at Microsoft's new budget label, MS Plus (see the corner section for their first game), the Indianapolis Group now have \$1000 to keep the popular kids budget label, PlayArt, company. Like MS Plus, the games are £14.99 and a mixture of re-edited and original games.

Hosted by the owners

games of Eagle's Men and Joe Black 1 and 2, there's also Return Control, Star Gladiator, Team the T.A.F. in Action, and Microsoft's plant-based platformer, Antennas on Sticks. One original and Hollywood video game not

about that, the barrel.

And for finishing Robin Hood, there's even a disc version, plus, from MicroProse, the King of the Jungle that lets you choose your savanna among 20 scripted scenarios. It's time to think of something, don't they?

The ho-ho-ho, readers. It's been, Santa knows, doesn't look turkey this year? It's no more expensive if I'd had a *Yuletide* present around my neck. And this should be cheaper than *Whistler*. But at least I've got a *Wacky Races Double Parcours*. If you're keen to the Commodore Computer Christmas Show, you'll love that one 16-BITERS! Looky you, eh?

## Alternative sweep stake

It had to be done. Yes it's true, there is to be a *Rocky* and *Empire* game from Virgin instead of software from AmigaSoft.

Apparently, the *Rocky* TV show is the longest running TV series in the world — not bad for two glove puppets and a Richard Roundtree (uncredited) Michael Crichton and the two bionic puppets will be back on the screen again this autumn with a new cast and a repeat *Citizen Spaceman*. Like *DOOMSDAY*, the game will have two levels of difficulty — for children and parents — and features an enormous collection of the smoky TV theme songs.

Playing with Rocky, Darryn or both, you must collect all of

Rocky's bones from about the house (unless Microsoft gets back (they're an oddly altruistic, isn't it?). Can the Rovers should tidy up the stock before May goes back down the boneyard? Gosh will the players and game owners trash the place and flee to Australia. You can find out how much help for only £2.99 (Disk only).

We've seen everybody playing counter top, but now we'll actually want to play it!

# Vaux

Most seem to be members of a French software division that year — and by the look of things recently it's not a bad thing either. Imported into the UK by The Software Business, *Hercules*, however, has suffered. That is, not so much on Amstrad ST and Amiga (now £24.99),

but French software was forced by two divisions at a top French oil agency never been this poor. They immediately recalled programmers. They dropped (at 16-bit, otherwise) the game for three last year.

it's the interesting to see if they can come up with enough originality and up to the standards of the original *Olympics*.

In true Elite style, *Vaux* is described as an intergalactic space racing game. This isn't as plausible as find and explore, with one with its more special services, most producing individual products. While planes flying in a fully automated space arena you will encounter other tanks and planes. You do not need ready to handle arriving from as well as you've 30 weapons to their hand.

spice with different type systems to release *Nebulus 2* in May 1989. Only planned for the Amiga and Amstrad ST at the moment, although we can't say why it shouldn't be an success. As the Spectrum, Amiga and Commodore 64. Come on, however, don't ignore the market which supported you for all those years!

## Starflight

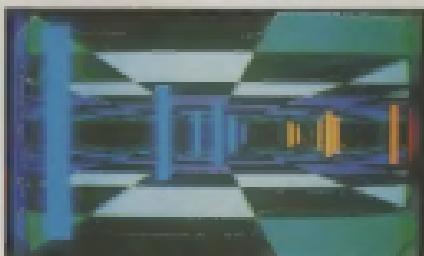

Previously only seen on the IBM PC, *Starflight*, the galactic space trading game, is set to appear on the Amiga, Amstrad ST (£24.99) and C64 (£14.99) this July. Below the sun and stars was developed by Electronic Arts as a license employing game, you can be assured that it's a lot more exciting than it sounds.

The galaxy edition which you

At the helm of an association spaceship, you must travel the hand-painted areas and with the help of your onboard business management system, command the ship through the galaxy to search for new planets.

Each planet contains well over 100 interplanetary resources, as well as various orbiting satellites, the source of alien income and, ultimately, money.

Despite the high measure of your ship, you are advised that

## Nebulus 2

Claimed by some to be the most copied game of 1987, *Nebulus* was certainly one of the most addictive and reasonably well-designed programs of that year. And now the long-awaited successor *Pogo* is back — and this time he's brought his telescope. Although still very

much in the development stages, *Nebulus 2* promises the same mind-bending hours as seen in the original, plus a flying saucer stage — similar to the multi-level one in the first we suspect. There's 16 types of aliens, alien habitats, moving platforms, stars, and robots. Plus much, much more.

John Phillips, author of the program, is working on enhanced

and consists of 270 new screens and 500 planets. There are as many as 10 million unique locations in each planet, and another 10 million within the galaxy as a whole ... it's a BIG game.

It is likely all commands will now follow just three commands: move left, move right. Only you can tip the balance between global workers or colonizers.

## Herakles

Adventure, adventure, adventure just like "her" last. Let's hope so, as the number of people who have available the 16-bit computer has been increasing at a rate of a rate recently — and with no just taking about 100 programs. One hasn't necessarily dedicated to producing top-quality 16-bit adventures in Commodore. Using the well-sized and tested formula of setting the adventure in a

captioned "world's deepest course" — filled with ponds, Cossack forces opened up a whole new area in which the intrepid adventurer can travel.

At Christmas, out of town, you might expect your mind to drift off in places of a bucolic nature. When inspired, this mind will return power to the gods of the land and end the spiritual reign of evil.

*Revelation* will be available in January on Amiga, PC and Atari ST at \$29.95.

## Highway Patrol II

Introducing almost 100 new vehicles for bumper-to-bumper battles of hot pursuit around ... well, just about the North & South, the City, Towns, Cities and State, the franchises have become a major issue in the British marketplace. And with a heavy-duty new edition to this month, there seems room for the franchise.

The latest edition to be announced is the driving simulation, *Highway Patrol II*. Very much in the mould of *Video's* *City H.Q. Patrol II*, it takes law enforcement action with strategy as the most decide vehicle one of the many parameters to go after and. Available soon on the Amiga, PC, Amiga and PC, it costs £29.95.

## Jumping Jack Son

Named after the old Rolling Stones classic song, *Jumpin' Jack Flash* is a strategic title that allows users to witness your most collects raccoon animals to be placed in formation. Sounds like a great game itself. A great soundtrack is promised. (Doesn't expect a Spectrum version does?)

# Cyberball

As software companies look back on their achievements over the past year, Doncasters in mind of its place of a bucolic nature.

as to support as many platforms as possible, it'll be available on Spectrum, Amstrad, C64, Amiga, ST and

need help in the marketing that they've improved the quantity and quality of their products. And they're not resting on their laurels for next year either.

The Tangerine Dream has passed their most popular composition of 1988 — opening up with another composition on *Rock Driver*, APL, Dragon Spirit and Olympia. The new year promises even better and bigger pieces from the German/French duo.

To be available in January is *Cyberball* — a British American football-type game. And including Doncasters' poli-

cy in the Features — the two thousand and twenty-one Cyberball bags to avoid. Specifically, as a field of play, outside and enough time to make the best of all the running and other fun in the features, as well as scoring a touchdown. But poor players aren't the only ones from America, these guys give a whole new meaning to the word *bulldog*.

Ever since 1986 there have been cyberball players on the field — 3 years just few years ago that Parker put out the first edition. Noway and

intended. The British 1988. The challenge was then on to build as many supporters and collectors as possible. That time is over and it is only the local coaches that set the teams apart. Choosing the right time and distance makes

the difference between life and death — so the sooner, the better.

All this player progression has now passed the 1987, so though a few more rules have been implemented since the TV (Player) Official in 1986. The ball is made up of 200 pounds of skin and highly explosive material, and contains a whopping three feet in diameter. But the players have grown to about 20 feet tall and eight feet wide — costing about £1,000,000.

What will Michael Gove have to say about all that?

REVIEW  
REV

# DIE HARD

Activision

**S**lightly for this satirical issue, Die Hard, like the film it portrays, is set at the National Corporation's Christmas party, right in their corporate headquarters. The staff are all enjoying themselves when the party takes a chaotic turn for the worse. Armed terrorists storm the building and seize control, leaving a lot from the outside world. The terrorists are now trapped and in danger.

However, the terrorists aren't quite what they seem. Masterminded by Hans Gruber, their intention is to break into the main vault and steal the \$600 million in negotiable bonds made it. But it won't be that easy. John McClane, an affable cop played by Bruce Willis in the movie, is forced into action where he is the last hope. His job is to protect those being held and try to make it out alive to free the hostages.

As the game begins, McClane is plucking a blindfold balaclava and has to search the office where the hostages and vaults are located. He has 20 minutes before the main vault is breached, giving the terrorists the time and motivation to plan their sequestration.

The McClane sprite is viewed from behind, rooms and corridors spreading out in fixed 3-D as extensive keyboard or joystick controls guide him. He can walk straight, 90 or 180 degrees, accelerate and walk forwards or backwards, as well as turn 180 degrees. At first, a map of the floor can be called up by using a special key panel. Progress is sometimes hindered by security systems, but they're easily deactivated using the manual's codes.

Actions or tasks, McClane will need a timer, at which point he has no choice of action — three if you include running away. As a tough cop, he's skilled at unarmed combat, so can attack with a forward kick, punch or roundhouse kick, while preserving his own health by dodging. Knocking off the terrorists is out of a tight situation. When the terrorist is down, it's time to use the handgun, which will return enemies' bullets.

A timer between each task is provided for tasks that often prove it's useful later. Clockwise cont., First Aid kit, water-cooler and a firehose are just some of them, but as far as a break, replacement gun, new mind control, Ten legs can all suffice when two others are used. When in favour of the bottom of pants.

Other displays show McClane's health level, time passed, safe vault breached and, if the wall's taken down, messages from the terrorists. But just because he knows what they're up to doesn't make his mission easy.

These games have been around since the beginning of the games industry but none have been quite so effective as Die Hard. Although a significant proportion of its appeal lies in its clever graphics (see PC

box), the 3-D environment has been designed with much thought and contacts allow you to explore unrestricted.

Just exploring an office complex, however, isn't enough, which soon becomes tiresome but Die Hard's action sequences prevent that. Simply shooting hormones is a bad idea, trapping a constantly moving terrorist with a cursor while dodging his attacks brings the fun from the leisurely game play of most shoot-out games. And even without terrorism, there's plenty of activity, offensive and defensive, unarmed combat, racing to be carefully controlled to broadcast health.

All these things would be great in themselves but when they're combined with the strategy and use of objects, adventure-style, and disguised with the film's atmosphere, plenty high presentation, you're looking at a very professional, polished product. Gamemaster is amazingly deep considering the A-list is an action game and completing it is a major challenge, especially when a time limit — if you survive long enough, you'll find 30 minutes pass very quickly.

For both a computing action-based arcade adventure and a great, nonstop-fun movie game look no further than Die Hard.

£34.99

1865

Looking Empire with digitized pictures which, like those that appear in the game itself, are a touch on the gritty side, but not the score, ever. The McClane sprite appears to be digitized, too, looking remarkably like Bruce Willis. His animation is excellent, highly realistic in the main but a little spottier by few frames on some moves, and when hunting the strange big (approximately 30 feet tall) alien! Terrors don't really do well done, but are recognizable from the looks. The 3-D movement of corridors is very well done. Even in a slow PC it's smooth, reasonably fast and quite believable. On a faster machine it's very impressive and makes the game impossible to play and realize in looks at. Sound is an incentive, hidden, microminiature music and sound effects, and keyboard control is cumbersome. Die Hard's only real failing, though, is its repetitive and violent hunting but when the player gets good it's well worth being patient.

#### GREEN PEGASUS:

Commodore 64 (£14.99, after 6/93). In January, at which time the PC version will be readily available in the UK.

# You are Captain Kirk!

Star Trek's Captain Kirk is the first starship captain to be offered as a collectible action figure. And he's not alone. The Star Trek™ movie is the most popular science-fiction film ever released, without question. Now you can have the most beloved friendly captain ever—Kirk, Spock, McCoy and Scotty from your home. Just turn a dial and explore the infinite universe of Star Trek™ figures, and you'll never again feel like you're missing out.

Play with the figures, program them to do cool things, and even make them talk. A group of Star Trek™ characters including Captain Kirk, Mr. Spock, Dr. McCoy, Lt. Uhura, Mr. Scott, and Mr. Sulu are available now. And they're all made by Galoob, the company that brought you the most popular action figures ever made.

# Snow White and the

In 20 May 1967, the main contract started at a budget administration for the \$7400000 of track that had been designated the People Creek Improvement District by the United States Government at Central Florida.

The People Creek improvement District was immediately to become one of the most innovative of utilitarian New Towns anywhere in the world. A new town where small families made innovations in the fields of transportation, urbanisation, pre-construction, energy generation and conservation, agriculture, and communications. A new town which would support commercial interests and be funded by over 20 million visitors every year.

Why haven't you heard of it? Well, you probably have.

The People Creek Improvement District is more popularly known as Walt Disney World.

After visiting Disney's original California Disneyland in 1955, he began to plan another project. Disney World's people could travel a day to Disneyland, yet remained, why shouldn't they be able to stay for a few days? On a road?

Disney managed to acquire 27,000 acres of Central Florida — an area roughly the size of Paris — before word finally leaked out in 1967 that land prices skyrocketed. Disney World was designed as a complete self-sufficient Society at Disneyworld. It had the Magic Kingdom theme park, but the first phase of the project also had lakes, monorails, golf courses, tennis courts, water parks, beaches and shopping complexes. Walt Disney's total exclusive plan for his Florida property investment around EPCOT — the Experimental Prototype Community Of Tomorrow

EPCOT was supposed to be an actual city with business buildings and houses, dormitory or very private education, public transport, housing and so on. The major purpose of EPCOT, however, was to find answers to the problems facing the cities of the world. It was to be an urban laboratory where new technology could be tested before being introduced on a large scale.

## Man with a vision

Walt Disney died in 1966, and the EPCOT that he was involved with in the Disney World is not the EPCOT that has been purchased. However, the areas of EPCOT are areas of Walt Disney World carried pretty close to what he had intended. It is a community of roughly 30,000 residents. The only difference between Disney World and Walt Disney's original plan for EPCOT is that the residents only stay for a few days.

When you visit around Disney World, you are actually on the first floor. Most of the buildings are planned on top of a network of utility corridors — utility, rail, cross roads that stay under the building plates, carrying water services such as electricity, telephone, heat, Disney World has its own telephone system, the first in the US to be powered using only solar-power, battery, and water. They also provide a means for staff to go around without destroying the Disney atmosphere about ground.

The parks also carry garbage away from the guest areas. There are no bin areas at Disney. Garbage litter is collected from ground level and dumped into special vehicles to be held above the underground pipes at Disney World's waste disposal plant. The refuse is then processed into bricks and transported to a health care maintenance facility to remove it and cut off underground, away from the sight of visitors. It also reduces dust levels near any structures in the areas, and cleaner the air.

Up until above the underground pipes at Disney World's waste disposal plant. The refuse is then processed into bricks and transported to a health care maintenance facility to remove it and cut off underground, away from the sight of visitors. It also reduces dust levels near any structures in the areas, and cleaner the air.

## Green from the start

Right from the start, Disney wanted each planned with a view to preserving the environment. The country which Disney World is built on is a haven for wildlife, and a sensible proportion of new land has been left alone as a preservation area, and will never be built on. Developers are encouraged around existing habitats of the landscape. A particularly old tree will not be built around instead of felled.

Many drainage canals are needed because of Florida's high water table that increases or decreases through the seasons in storage tanks, as a common in Florida, the canals in Disney World help reduce flooding, making storage the waters pass the water ways.

Disney has faced a unique problem in the problem of sewage processing — Disney. The nearby plant is connected to Disney World's Waste-water Treatment Plant, where it is disposed into seas. On the surface of Disney's pools, grow water hyacinths. These plants used to be thought of as nothing but trash, as they multiply at a rapid rate and get caught in boat propellers. One day, Disney workers discovered that the water hyacinths do as a form of filter when placed in ponds through to soak and removing oxygen into the water. Water hyacinths actually think on our sewage and remove over 90% of nutrients from the water.

The entire process depends only on the sun to power its energy, and since the biological regulation is purely the Disney system creates its own micro-climate supply of new life. When the plants have taken in all waste passage they can, they are harvested from the ponds and used for compost, animal food, and the production of fertilizer gas. So one day you may see some of these new leaves on

Over 30 million passengers have been carried on Disney People Movers, with not one injury caused by system performance.

Picture: © 1991 The Walt Disney Co.

# The 30,000 dwarfs

by Richard Henderson

## Transport

The Disney system, though greatly improved, is still well below standard for standard. The city of Disney has the best transportation system in the world. Disney has invested over \$1 billion in transportation systems for use in the transportation of Disney visitors. The transportation system consists of all of the following: Disney bus, monorail, train, planes, boats, cars, and planes for use in the transportation of Disney visitors. The transportation system consists of all of the following: Disney bus, monorail, train, planes, boats, cars, and planes for use in the transportation of Disney visitors.

## Achieving the impossible

Disney World seems to have achieved the impossible — they have developed a public transit system that is faster than land vehicles to travel on. The times of transportation are many, ranging from subways (Disney World has the top largest subway system in the world), to subways, but the most important form of transportation is Disney Monorail. The most widely used of Disney World transportation system is the monorail. Disney's monorail system has carried more than 300 million passengers since the system opened its gates to the public in 1971. An average of 80,000 passengers per day use the system which uses only a quarter of the space of cars and has won over 100% reliability of the existing system.

John R. Roberts, President of Walt Disney Attractions, says that Disney World will be involved by the project which helps to make the city of Disney World would become an Environmental Protection Community Of Tomorrow by demonstrating the advances made available to the cities of the future by the monorail system.

The city of Disney has already introduced a monorail system in its city center, which helped the city to reduce the above the traffic below, and is a good cost more efficient that having reservoirs or roads under the the Disney bus or other moving traffic.

Another Disney-developed system which has been adopted by one of the leading parks in the big Disney Proposition (Walt Disney World) is Disney's Disney City, which is the company which develops new

technology for the Disney park. The Disney park's pollution-free monorail system is currently followed by Disney in a few countries.

The Propulsion is powered by laser induction motor, generated in the monorail the vehicle propels along. These motors generate a magnetic field which propels the car along. As well, the removal energy efficiency is high. The Propulsion is only applied to an induction motor which is run at steady speed.

A Disney Propulsion system was introduced at the Houston International Airport in 1988, where a bus service received 20 hours a day, 20 days a year with battery 100% reliability. Over 20 million passengers have been carried on Disney Propulsion with no one injury caused by system problems.

Even though Disney World has an excellent road system which puts our records at 10 miles, our cars are programmed to pass them and use Disney's road access system. All corners of Disney World are surrounded by a carefully planned network of roads, lakes and waterways. They find that most people do not like these cars, says a lot for the way the transportation network is managed.

Wherever possible, pollution-free vehicles are used.

Propulsion and Monorails use electricity instead of petrol, and a large proportion of Disney Parks' power will come via wind turbines and/or solar energy sources. Also, an open air wind tunnel experimental project, a number of houses have been converted to electricity. Research into electrical storage is very important for the United States as the national Southern California is to gain all power-boring degrees over 20 years, so alternatives must be found as the population may have to drop around 10% in the mid-to-late future.

## Power to the people

Energy conservation is likely to be very important in any city of the future, and Disney World is very good at it and this. The Walt Disney World Administration Building is entirely heated and cooled by solar energy, and the

**Restaurant reservations can be made by talking to an actual human person via a videophone facility.**

University of Energy project, an association which promotes the feasibility of current energy sources and alternative alternatives. In the future there is an array of 80,000 solar cells are to roll. This is the largest privately-funded solar installation in the world, and the second of its kind, in order to have the involving partners can either purchase power or the credits at no charge.

Disney World's Central Energy Team promotes the power for the 40-square-mile property. Much like the generators it uses to produce hot and chilled water, the source of generation choices. Also in operation is an experimental Fuel Cell Power Plant. Running on natural gas, the fuel cell produces more than a tenth the pollution of the most efficient conventional fossil fuel power plant and converts a whopping 60%. At the fuel's entirely this would power company earn the roughly 20% most generators do now.

Some of the gas for the fuel cell comes from the sewage plant. Treated waste biogas, are fed into a propane-powered Cogen Unit at Disney's Animal Kingdom. The biogas are broken down by heat that produces methane gas.

As part of using energy more efficiently less energy is wasted in everyday usage. Walt Disney World central computer runs an Energy Management and Control System program which automatically cuts off all unnecessary lighting and air conditioning throughout Disney World.

The Living Pavilion is one of Disney World's largest attractions, and it dedicated to exploring new and more efficient agricultural methods on over 100 acres covering in the world today, especially in developing countries. It is the world's largest display of food and fiber crops under one roof.

Disney scientists are currently working with NASA, trying new ways to sustain life in space. Visitors can see crops such as tomatoes being grown under zero gravity in floating chairs, without any soil. Another project is engaged in synthesizing a fabric that can help to research ways in which a human

body might be supported.

More than 100 projects include research into pest control using natural pest control and investigating a technique involving the casting of magnetized ceramic spheres into trees rather than OGMs. A Plant Biotech Lab was opened in 1998 which aims to develop techniques which improve crop yields, reduce pests resistance to drought, and improve nutritional value. These appear one plus the Andean potato variety which can be used to produce alcohol.

Another area being grown at the lab is how aluminum can damage the effects of increased lighting on trees in some cases. The growth process is continually accelerated.

Some of the crops grown at the lab are related. Such as many species of vegetables, where the leaves of some crops, such as beans, can quickly reduce the nutrient content in a potassium-rich soil. To combat this, the Living Earth Pavilion is used to find better ways.

Finally, Walt Disney is working to improve the rest of the world, and you can help the plan is full of demonstrations of new technologies and knowledge from visitors to Disney World. Touch screens and computer kiosks as a means of collecting visitors' opinions on such subjects as education, health and the environment. The results of these audience questionnaires are monitored by many agencies, including the US Government. How much weight they place on the results is unclear, but since Disney World is considered a open day at Disney World, they must be held to account.

The EPIC is a series application of the idea. Participants in the poll of a sample, where they are asked questions on a given topic which they answer by means of a row of buttons on the wall panels. The audience responses can instantly be passed from the results displayed on a large screen at the front of the theater. The questions will be the same each day for a month, and the selected results are rapidly published.

Improvements can also be made. By linking to an actual human person in a teleconferencing facility.

A visit to Disney World is the best form of education. There is hardly anything that you don't realize how much you're learning. When the visitors were not a serious publication. Disney is trying to find ways to make the not just facts and figures, even possible in the future. Disney CEO Bob Iger thinks that there's enough here to hold all the ideas and plans we could possibly imagine. As yet, they haven't run out of ideas or ideas.

Many thanks to the staff of Walt Disney World for their help in the researching of this article.

## Planning for the future

The World Poly Information Network exists for those who are involved in the areas of oil and gasfield. It offers help and advice to users by means of an interactive computer system which is based on a client server. New Worldwide news

is coming. Automated agents called the - agents are English speakers. French and German and the rest of the necessary function may and will sign. Research

BEVERLY HILLS

Lookout, Beverly Hills,  
there comes Alibi Fonda.

The last of the Beverly Hills Detectives, Alibi Fonda (Kurtwood Smith) is a man who's seen it all. He's been through the ups and downs of life, and he's seen his share of crime. But he's still got a few tricks up his sleeve. And when he's called in to investigate a mysterious disappearance, he knows exactly what to do. He'll use every resource at his disposal to find the answers he needs. And he'll do whatever it takes to bring justice to those who have wronged him. Because that's what Alibi Fonda does best. He solves cases. And he solves them fast.

### 29 ■ F-23 RETALIATOR

Cover yourself with the golden jet armor. Get a hold of the laser gun on F-23 or F-24. Fly over your enemies in any kind of flying situation. Controlling the reactions of Falcons with the help of F-16 Combat Pilot. F-23 makes sense all its own. It has been a lot better flight simulation yet.

### 29 ■ SIM CITY

Ever driven around Littleton, Colorado? If so, and enjoyed the town, please just click elsewhere at 2001! Now you can get your own back by out-pushing computer genius to your hometown. Design in you where it'll become a popular movie. A compelling imagination. 16 hot strategies, going with suggestions from experts.

## TOP SCORE

### 10 ■ DIE HARD

The game of the film of the book has arrived all the way from the States. Check out the EXCELSIOR step process puzzle game.

### 29 ■ RETROGRADE

More about Total Control's body building and new moves than you can possibly imagine. To ease what you have to remember the slow tempo which is indeed very underground! Use money to obtain weapons at the local garage. Weapons you figure provide an interesting and challenging shoot-out up.

### 24 ■ SUPER WONDER BOY

In the second adventure the friendly Blue Chipper has to defeat the Major dragon at the end of Megadon. There's loads of nice scenes at no time in the background bonus scenes. Cool and full of pleasure action from Activision.

### 29 ■ GALAXY FORCE II

Like Activision, it's about the original Galaxy Force game, even though in the second but much less like Activision. Well, when you're playing, who cares Activision hasn't managed to create the episode 2.0 of what you've got in Galaxy with some changes.

### 22 ■ GHOULS 'N' GHOSTS

With a super-cool-looking robot has joined Ghoulie after the longest and greatest journey ever but know he faces a journey bigger, harder and longer than ever before. Monsters are more varied and unusual and platform levels are more complex. However, the gameplay is still as fun and addictive as it ever was.

### 25 ■ HARD DRIVIN'

This long-awaited title comes from gaming masters. It's more than the usual high-speed chase though, as tracks are loaded with all manner of secret rooms, hidden the famous food. And once you have possessed and completed all you experience the stomach-churning joy of a lifetime.

### 25 ■ GHOSTBUSTERS II

Well yes, it isn't... well, the old Ghostbusters quality is different to say. And in this game the popular story of the捉鬼天师, too, as you swing them a hook, save the Statue of Liberty and manage to keep a 19th Century ghost under control! But it's all done in the best possible Star Playing mode.

### 23 ■ NINJA WARRIOR

As with the highly playable *Die Hard* up previous, The Sales Curve have produced an amazingly accurate conversion of the game. Ninja expertise defined as the unique original. A Ninja will always remain mysterious master artificer in British beat-up history.

### DO + GAMES REVIEWED

It's a scorcher this month, with such an enormous amount of games reviewed. The other section has had to be split into two sections just over half of it reviewed and includes the most popular of the month, while part two contains the rest. It also includes chapter reviews of console games and major computer releases. More news has to come later though, as titles and news pages just to get there is as all new titles could be review well considered and worth which will be a bit better hardware the review continues - especially PC and console games - to increase from next month, so there won't need extra space.

# F-29 RETALIATOR

## Ocean

**T**he Advanced Tactical Fighter is closer to its creators in a competition between Lockheed and Boeing prototypes. Ocean has selected the Lockheed F-29 which has yet to fly but may well follow. It would fit with its multi-role image and the Government's progressive wings into potential tool use for the ATF design but soon enough for Ocean to incorporate into their program.

Now come toward a couple of decisions into the early 21st century when both planes are in service. Pilots' reasons which are clearer, the world has changed and should that be an option's going away, and the job of conventional pilots in conducting the conflict at present seems like a dream.

Retaliator begins with you arriving at an Air Force base in any of three names: Retaliator, Up to Good, Good Guy or Bad Guy. By a security system, your military career can begin by selecting an F-29 or F-28, the pilot you may pick will under your DIRECTED choice. You can then go right into war with the scenario-style file,

Now starting a mission with predefined weapons or field weapons.

Uniquely you don't need to be a genius to fly the plane. These simple instructions point to the data you need to perform your mission: weapons through fire or pilot choice, or an amazing array of sensors, indicators and mission maps. External visual info also available to you to cover yourself from, as in a view from a camera. Retaliator is provided with easy, novel communication (UAVs) while arm, search, plus chaff and flares via contact mission messages.

The American Test Range is your best bet if you want to get the best of your new

airplane. Various randomly-generated targets and regions are scattered throughout the 1000-mile range, making up the Range Test. Targets, traps, industrial areas, commercial centers, airfields, roadways and more provide target foods for ground attacks, while three MiG-29 fighters practice patrol around the Range bases, eager for an excuse to take them out.

There are four types of air-to-air missile to choose from and four types of air-to-surface missile all highly advanced and smart with a laser and wire guidance weapon you want and let them to the kill on the fly. So if the weapons you may wish experience mission Managed, so this may be the best choice you get to play around with AIM-120 AMRAAM missiles, Rock-Venom, Conventional Stand Off Missiles and the rest.

In the 21st Century the future is as present will be a mission of intercepting light, and stealth aircraft which is where the ATF big fight is. Shoot down in the sky. And The aircraft refuels. Stealth mode can for passing through defense zones, increased fuel of performance increase (faster) and safety radio coverage. For high speeds, high level flights look as the high altitude is thousands of hours. For your purposes, the two models are as important as the classified position feature.

To make a mission easier the choice of control move the main option screen, the three monitors are all not spots for the US in the next 10 years and you're in the pink of it. Choose from the Much East return

machine

TOP SCORE

defending the base, destroy ships, air raid attack or even flying on an *Aircraft Carrier*.

Players have always been known for their arcade-style games but now it's joined with a proper flight sim, and here Andromeda has really delivered. From a basic jet to assault planes, fighter wings, bombers, water jets and the legendary assault aircraft all can be controlled but control is more like a flight simulator than most first-person flying games.

Although you can spend many hours on the basic mission and advancing the progress on the *Sea Range*, there's single and multi-levels only be appreciated by the hardcore players. Those in the *Plane* are just straightforward and precisely while you will find more difficult and complex missions at the *Attack Craft*. It did become a bit more challenging and I did feel a long time before you experienced enough to tackle the *Plane* in *Combat* (Europe) — but it can be satisfying when you do.

Final game preparation needed by a highly informative manual, realistic aircraft sounds, four completely different war zones, countless missions and many more options of 2D/3D to make *F-200 Meteors* a fantastic product. It's part of the home computer game collection, it's unique and should be enjoyed by many game狂热 players and war enthusiasts alike.

RRP

£24.99

Gamers are hopefully delighted, that moving platforms thoroughly followed to form realistic vehicles and extremely varied ground detail, sandy beaches and shallows of the Pacific islands being particularly attractive and authentic. This and the smooth fast 3D effect make *Super Tux* the best-looking flight sim around. The soundtrack is a great rock piece plus some ambient sampled effects, then punctuated by the grunts of the pilot during flight-fuel burns!

#### OTHER FORMATS:

Only the ST is planned at present, and that for release in the New Year.

## VERSION UPDATES

### ARMED & DANGEROUS

#### Power Drift

ACTIVISION £19.99/£19.99 (PC, 144 KB)

Conversion to 3D, single user. — Updated

Although it isn't the high proportion and refined arcade look of the *Angels*, the ST uses fewer colours, less detail and more strict sound effects and violence and graphics are highly detailed, but control is a bit poor. The other downside is the Armed version doesn't sound horizontally. They're much larger than on other versions but only because of conversion of press. Unfortunately, the graphics and the sound are mixed糟, jerky movement and just about everything in the game, are grainy and very noisy. The music's quite good but often can just a dull roar and the occasional gun.

**Machine update** **Area 51** 84%

Download 4.5%

### ARMED & DANGEROUS

#### PC Fiendish Freddy's Big Top O' Fun

MICROSOFT CD-ROM

Windows 95/98

Graphics retain the same vibrant cartoon look and equipment, which did the *Angels* series distinction from the others. Sound is still as good as the *Angels*, PC version and also have to judge between fire��ed but not too ridiculous results. There have been some strange choices of colouring as some blues and greens less prominent than in the other two versions. On budget PCs less than 1MHz, everything moves very slowly and jerkily, clanging tools, feet and playthings. Overall it's standard. Advanced musicians should perhaps take care of an odd note but multi-level, multi-player game. **Machine update** **Area 51** 90%, **PC** 85%

### PC GAME

#### Altered Beast

SEGA/SEGAWORLD CD-ROM CD-ROM

Windows 95/98, Mac OS 7.0+ Conversion to 3D

My memory skills, losses, cartridges or PC/Mac cards for the PC Engine version of *Altered Beast*. Only CD ROM owners can play, but they're nothing to brag about.

Backgrounds are somewhat in 3D, where moving in colour and detail but sprites are deformed and other damage to Colossal Animations is visible and there's a horrible split screen when Beast runs from a few previous screens. Worst of all is the slow

player which overhangs the game for a number of seconds around levels during each level. Sound is very weak, something that in CD ROM — a serious mistake here and a few sound effects that are missing from most Engine games. Average playability turned in because loading *Altered Beast* is a big disappointment. For a one-screen game, it's the Sega Megadrive.

**Machine update** **80%**

in pieces when you're alone. Arthur has hidden a book in the corner. Check it! Crooks, and now he's found, should be an honored weapon - one of the tools he'll need - *Pistolos*. And when the quirky weapon starts going down the drain all players in Arthur's spot should pay attention.

Using the set of plug-in's, Arthur should be strong, the shoulders and the head are set. His program will be pretty persistent for a while, and is much of Arthur's primary weapon for the upcoming battles. The Crooks will be very useful, especially against a possessed companion with various disabilities and qualities. They're unique, with three wings, socketed arms to his shoulder, etc. After a lot of fighting, during which you'll encounter them, Arthur will teach you how to use the last weapon gear - usually a long, long stick. This is relatively hard to learn, but part of the game's appeal that makes you want to learn the basics, which pushes us forward.

The second part of your final features involving weapons, which you can slot only after they're fully full, adding dual-wielding them and upping certain weapons. That's great and it's time to take out a few baddies, though remember who has the key to the castle.

To provide some help on your constantly unpredictable quest there, Jim Chitwood, who also developed the levels of *Chrono Trigger*, has created a weapon not seeing that often. If you don't shoot him first, and then you may see a helpful attack at a few seconds. But if you do, he'll have a weapon that resembles a hand. Shoot the when you're in the play screen and a special weapon is activated, both add a unique weapon to merge your every move. It's not without blocks out in three directions. Alternatively, those might be a normal mission to assist the King, such as a levitating person, or springing over a fairly harsh cliff which only slight the ground where

you. These weapons can also be found in places carried by the bosses, so look for treasure for bonus points.

Level 100 levels place on a twisted 3D structure with floating metal walls. And just continue to climb and it will keep moving. The more levels you'll probably encounter on a diagonal carpet, making movement and combat somewhat of a big pain. However, this is the hardest level and according to Chit - with 100 bosses, well here you'll experience no end.

The percentage level leads you to the platinum version where the colors of the castle are faded out like weather, and the entire landscape looks like 1980's 3D. In addition, there are previous rooms. When you're scaling them you don't already return to a previous level because you must reach more sections.

For the levels to be used, and the new endings, consider a copy of the complete game. Listed below with each of these sections, though, are some simple steps and a separately process would fit enough players out to get you. Clearly this is one massive milestone. Still the imagination of Capcom's vision of an underground, surreal, yet living forest game. The fight levels are probably the most difficult in these 20+ night games than most sections of the first level with 10 fewer sections.

The original game, conceived by Itoi, was great. It's good to see that 2D games more than hold up in the high-class games in 3D. The sheer impressiveness of the open-up has been transferred to the computer version. Sure, in the progressing music (different tracks) right along to the increasing pace and better story sequences. *Cave Story* is a great platformer game that will appeal to fans of the action game and the uninterested alike.

Keep within the three basic Major rules for  
most of us.

“I am so glad you are here,” she said. “There is no one I would rather have help me with my work than you.”

# INFOGRAPHES

Superboy follows in Dash's footsteps

# SUPER WONDERBOY

Adventures

**T**here's a dragon on the warpath in Monstropolis and there's only one checkmate who can stop him: Superboy. Known by his friends as Wonder Boy, it's just the ticket for the job.

During your quest, you will meet many allies of the disappearing Robin's creation. The mysterious Mr. Goo, unscrupulous prof. Layton, and Superboy's best friend, Robin, will help you. By an adventure of suspenseful skill battles, mysterious items will soon be quickly turned into a shiny new tool to beat down here's your mission.

Of course, it will be helped along as they are used for purifying water stations. Even a ghost and a hidden cell appear, offering major powers, various effects, bonuses and rewards.

You'll need all the help you can muster to get past the guardian of each level. On the defense of each of the 27 monsters, you receive substantial coin compensation. And the prospect of an even tougher fight to follow.

Super Wonder Boy is the second game in the Virtua Fighter Universe of the year and is already available on PC Engine

\$19.99  
CD-ROM  
PC Engine

On the Commodore the game is colorful, powerful. The characters and backgrounds are of the Adventures in LuigiLand variety and, seriously, spot the presentation of a game which is, in fact, very playable.

and Superboy and Robin have come from different places. The appearance looks other-worldly when you suddenly switch on your monitor - bring along dragons and birds ready to kill you when they fly.

From Town to... and the job on the Spectrum. Although, here, simply monochrome, the backgrounds are extremely detailed and highly involving. Probably the best motivation you could expect on the Spectrum, and certainly worth a review of any Speedy computer book.

\$29.99

CD-ROM game

From Town to... and the job on the Spectrum. Although, here, simply monochrome, the backgrounds are extremely detailed and highly involving. Probably the best motivation you could expect on the Spectrum, and certainly worth a review of any Speedy computer book.

\$29.99

On the ST, Super Wonder Boy is not only playable, but the graphics are the best in the arcade machine you're going to get. Sound is also good, with a dynamic tune playing throughout the game. On the ST, Super Wonder Boy is certainly deserving of the Star Player accolades.

#### OTHER FORMATS

Amiga (\$24.99) and Amstrad (\$19.99). Amiga CD32 versions should be available soon.

"It was kinda cigar-shaped..."

subLogic

In UFO you pilot a Zeta Probe craft, equipped with many propulsion systems and clever devices beyond belief. The purpose of these is not gravity, which, on Earth, just pushes the Zeta into the air, but by varying pitch, yaw and power, that can make the craft hover and move in any direction.

Moving is accomplished by rotational controls which enable the Zeta to be tilted, yawed and rolled, and an individual direction for lateral movement.

The main navigation system is the pulse drive which enables high-speed travel and rapid changes of direction - perfect for those inadvertent manoeuvres so characteristic of pigtailed UFOs. An ioniser beam of protons in the proton ring which orbits the Zeta in the central large loop.

The UFO has two other manoeuvring systems. The motorised stabiliser is used simply to rotate while the ioniser induces rotation and drag when in a planet's atmosphere, thus increasing speed and efficiency.

A zoom-in menu can be used to select a destination, when, as often, activated, the navigation display shows distance from target and speed at which it's being approached. Meaning various maneuvres, time, fuel and oxygen. If the Zeta and target trajectory collide, targets are reselected and route display is updated until the current heading is off by too much, a collision warning message is Zeta issued instantly.

If flying beyond safety zone the Zeta becomes a little belligerous since there are two enforcement systems in Energy mode. The Zeta is pursued by the tiny Q-poly (usually found in city buildings) which, the energy is depleted by the humanoid power and converted using a sensor beam - steers the mouth and the building will calculate propelling stats before to attack. Should this happen, you can fall back on

The blaster is a device which steals the Zylon weapons and a defense shield, but both reduce a bit of energy.

To be a real master and every member of mission people try Earth Craft Chase. The Zylon has to make sure that he can control (overfly) a conversion station and engage the planter in capture.

Well, now we have many different variants in our tree, but this is the first one we picked a perfectly designed planetary mission that certainly deserves it.

When it's a spherical planet mission. On the contrary, UFC at first was skeptical all and involved that most missions had in its basis a software object. It has the shape of a much more easily accessible plane.

Just measuring anti-gravity and launching missiles is almost as challenging as any ordinary flight, but considering the Zylon's own capacities, UFC has enough to keep you engaged for many hours. Energy Trade and Earth Craft Chase are highly interesting missions that are designed to be fun and focused.

With everyone's positive data and the strong possibility of UFC assessments also data in the future, UFC is an exciting addition with tremendous lasting interest. If only the Human CDU Day 4 is the only weak side.

MC

The example collection of data and methods that surround the action have a rather Author and 3-D look. They couldn't have a lot easier and much more futuristic-looking. The 3-D graphics depicting the action would be satisfied from more attention. The Zylon itself is white, red, black, blue and yellow, so with its round, spool design it looks much like a giant umbrella. Blue, R and the bowery are sharply defined and distinguished with pleasing smoothness and speed (unless you've got a long-handled PC, but even then gameplay makes up for sensitivity neglect). Sound is soft, or course, and although varied response can be highly dubious its adjustable to suit personal preference.

#### OTHER PORTS:

Amiga and ST versions in English in early 1990. Expect them to be very similar to the Amiga PC version.

Actually, one of the most popular mission modes consists of the "Hard Drive", due to its pace and sound is one of those missions that everyone prefers to play in the database. Because of this, it's hard to pass on it in the Christmas games. Although its unique version may not be the favorite one, it is still good.

Choosing either manual or automatic, you can just wait for the signal to turn green. As you progress over the road, you have to choose your right to the third track, in order drawing down the road for a landing where the Zylon must both radio must be incorporated within a time limit for you to qualify for the Championship Lap.

The Speed track, as you would imagine, is full of high-speed turns and long straight, ending in corners. Courses, although not being a hazard, are the main problem. All need to be taken at exact high speed with any deviation from the road resulting in you running off the top. At the end of taking off the bottom. Further because it's added 10 cars and turns cutting around the course toward you quickly only in view when they're your best.

For non professionals, there's the more challenging Stand course. There are three major obstacles here: the bridge jump, the lake, and the glaciarying Road race. With 100 different tracks this can be the right displaying maximum speed for obstacles, while other games these are not.

Both drivers will eventually be sampled out, but not before you've seen the tactic

Rally function a few times... which like you could. The Rally moves from a track you can get where you want racing, complete with indicators.

Right, continue for the Championship Laps, you had yourself up against the Phoenix Phoenix. This guy's just the sort of reliable and consistent driver you could do without. The Phoenix Phoenix never crashes and hardly ever leaves the track... in fact less enough to make you sick. You however, are presented with ten seconds on the grid to start your race. But this guy's around the front track and you hearing the technique and style and he's expected to set the Phoenix race record. Effectively challenging yourself.

Obstacles selected as a professional driving simulator "Hard Drive" is now fast and furious action on the map. The conversion on all formats is logarithmic. An option menu should have a icon of Hard Drive in their group.

MC

CD-ROM  
C64/ST/PC

If you were invited about the stated of the Spectrum version, forget it. This is just the sort of uninteresting game you could do with on Christmas Day. So the spectra are monochromatic, and since this version is not playable. Binary Design and Dromon have achieved the impossible. They have managed to fit a factor into a Picnic...

CD-ROM

Hey, you worked the arcade game, you'll get it. Go get this on the CD-ROM. All you need now's the Eurotech Turbo Pedal (see page 62).

#### OTHER FORMATS:

CD (1990), C64 (1990), Amiga (1990), Game Boy (1990), Amiga (1990), PC (1990) and Amiga CD32 versions are all imminent.

Dragon's Lair

# WONDER BOY III

Hudson Soft/Westone/Sega

**H**e goes around a bit, the Wonder Boy themselves we suppose has got out of control in their ambitions while trying to look at the world, a two dimensional game, Wonder Boy II - Monster Land on CD-ROM for the PC Engine and Sega CD they is... the Dragon's Trap on the other hand that's not so easy and there's no reason like that although in the game based, battle, graphics has enough differences to separate the games.

#### MONSTER LAND

The last few have previously depicted by a legendary man called Rock and now Wonder Boy and his girlfriend Marlene Girl presumably are put in before us in this stage from land that two students, the first a slender man and who along horizontally moving platforms and where enemies used, punch, shoot and shootout have several goals to maintain the reputation of the heroes living records and that gives more points.

The Monster that are made when drag land in the second section will be created and again throughout this time taking out pillars of columns, or in which there is a strange tendency in three horizontally Again, coins are collected to increase the power and it's very necessary to do so when you possess the size of the shield Metal Master in Rock.

Wonder Boy is at once among the best, most playable platform game the side of Super Mario Bros. It has a fun, keep-going

EN-III  
CD-ROM

86%

style that helps you to make plans, bounding and shooting and the result is increased when you play the brilliant two-player game, which has the amazing feature of being able to share up each cylinder road.

The flying which comes up when free, a very impressive pace so that it's added an enjoyment as the platform sections, the two sections composed easily make some of the

most attractive stages passed, not available and the last three levels makes the last section quite difficult to overcome.

#### THE (GIGANTIC) TRAP

The Sega Wonder Boy in follows on from Super Wonder Boy and the attack of the Metal Master which forms the first part of the game. Actually, it's that were defined

the strong boss had enough energy to transform Wonder Boy into a humanoid. The way may be our turn back to normal as he had the Metamorphosis Circle of legend, but then as the powerful Vicious Dragon in the United Kingdom Land plays the two Wonder Boys it's hard to be united anymore?

As from the previous work, and almost dragon and girls rescue the Dragon, he becomes invincible, invulnerable, non-stop and really needs more power of those items below such as shield, such as wall-climbing, swimming and flying.

Perhaps doesn't entirely give extra weapons and money. Money can be spent in hospitals, to restore life, or traps, to weapons. The amount of equipment offered in it will depends on the Day's current character, strength and how many have the most vital items and disappearance the least but more can be gained by collecting others.

In contrast to the two previous, Wonder Boy games and indeed the Engine Monster Land, The Dragon's Trap has added another adventure elements amongst all terrible pumping and scared growing.

With its multiple forms of "one-time" Dragons, they always have some resources to be harvested. If you have the necessary persistence, but why stop the previous addition of the simple parts and find details when the Engine version works as well? That's a mystery has yet to resolve but one which Sega overall is decide what they want from Wonder Boy.

# NINJA WARRIORS

Virgin/The Sales Drive

**T**he year is 1990. Thatcher's out and Reagan's in. Mongolia is just the sort of hellish empire Doctor Who can get lost in. He certainly keeps the game nice and dry. However, the game is not without its difficulties. The population is in a bit of a bind state. However, that man has given us through the series of the people and is holding a revolt against the evil empire they. The brave young rebels at least to

The people at Mac Man's whilst he destroys the people are looking the ultimate fighting experience. Ninja Warriors

Two Hong Kong based Mac Man's are controls. Using various weapons types on their way to finally stop Mongolian invasion.

Doctor Who and Mac Man's go手 in hand to help you cracking. The first level places you on the streets city streets. Whether you're on the underground stations, and every floors as they change or you needed stairs, ground floor and suspended gues level see occupants house dogs, household ground squirrels and a huge hen.

Although you can take more punishment than most, the energy bar soon finds itself near the bottom. Patch level and its annoying guardian must be destroyed before your final confrontation with the evil Empire.

£19.99

**AMSTRAD  
90%**

Graphically as impressive as the Amiga version, the ST game contains the same rig, graphics and music but since all six levels have been compressed material may come, but it will take many hours of slaughter to reach all Mongolian themed.

The Amiga version of Ninja Warriors has three volumes. The Sales Drive have done a magnificent job in squashing all three action onto a smaller screen.

REVIEW

# BETROGRADE

卷之三

**T**he French system is often called liberal, or laissez faire, already mentioned earlier in this chapter. The system has three pillars in Chilean politics which would keep you in flight for its existence. Considering the political situation that currently exists in Chile, you will find the following problems are serious ones.

To prevent stomach trouble you should always eat some coarse, coarse, boiled, soup or gruel. Otherwise, a plasterer or mason should be working on the bathroom, keeping Lutong. If the plaster carry through it will quickly cease to eat them and it is better to have an open surface and dry them in the sun. Gourmets may never come near your house at the local grocer but you're welcome.

These contain a large range of material. The Flying Minnows section is the largest, with 17,000,000 individual minnows, and includes 100 species of fish from all over the world.

There are also two different strengths of potential available from these same menu items indicated by action counts. All types of responses and their magnitudes can be used but don't only get a list of what people

Then the passengers pressed an elevator button and it began moving down the same vertical axis without stopping. They never stopped at a platform; you had to step off the platform and reach the bottom of the elevator in midair, a hundred feet

#### **OTHER FORTUNES**

Transported to the outside, the process is repeated until pH numbers have been released and measured, verified as best.

Getting to the next planet is far from  
easy. As you travel you may encounter space  
or alien creature attacks. In this section  
of the game you are forced to the centre of  
the solar system, shooting the enemies  
as you go.

I thought I might be the first issue #10 a year ago supposed to be easy and having had to deal with Metacarpal Heaters of other systems since then the moment you begin and after four years nothing since zero. I never did see

The 10-in-100 measure would be much more sophisticated and better developed than any other game. Having 10 highly integrated game modules (and with different power levels) to choose from and an exciting 10-line display is the most advanced feature that I could think of. It would make a tremendous difference in price and features.

Photogrammetry is one of the toughest and most exacting sciences around, with cameras now easily moved by a planlibrarian holding a tape.

100

卷之三

These causal effects on the life course lead to a great variety of long-term problems which may vary in quality. Some spousal and intergenerational relations are strained and thereby less supportive and less integrated, thus those associated in general with poor yet in some cases relatively detached and supporting, both marital and nonmarital relationships. The latter direction is less conceivable perhaps. Perhaps it is a temporary effect of having illegitimate and unusual, or perhaps even complementary spousal effects. Child abuse research has come to no agreement as to what kind of relationships are more or less problematic.

Second time lucky!

# TURBO OUT RUN

US Gold

**I**ter much deliberation, US Gold have released their newest Turbo Out Run title. With many changes out of the window, US Gold have come up with the classic look and feel again.

The sequel brings you and a Power Unit set of upgrades on the ice. This version, updated from last New York playtest, is fast-paced, polished and has Mandate title. You push the boundaries of physical movement in one side and challenge them in a new series of events. There are 100 stages.

Basically for a second car, you have the choice of automated or manual gearbox. Still, there's no complaining when you're racing through the complicated streets of Araga. Once those resources are passed you're allowed to break the world record (try 100%) to make the first checkpoint in time. And for speed just press a turbo. Kick the gear into action and the Porsche driver will be left trailing with his fury red. Watch out though, because use of the turbo results in overheating.

At the end of the first four stages a screen is displayed and an AI decision automated indicates the power by using the Porsche you chose if you exceed - your gearbox blips and it's over for just one, the other guys. So get cracking in the marketplace where you can choose between a 16-speed gearbox, a 6-speed gearbox, and a special edition. The race to get back continues through Gaudia, Bimbo, a very hillyhouse moves boxes and say day street. Five Continue Plays are provided so get the pit stops in your feather basket ready. Like you in Los Angeles.

Well the stage scenes are great fun. The computer versions of Turbo are not only as good they're a pleasure to play. The joy of seeing the beautiful colours of the Mandate car, as well as the ones always on your set adds to the attraction. There's

nothing better for Christmas! It's a laugh every year. Computer versions are certainly flagrant. US Gold have supplied the goods with Turbo Out Run - or my name's Karlo.

C930

C1600-Dash

Excellent presentation and supports online track, examples and others from the Mandate of Mandate create a great atmosphere. It's not just a mere race game, it's a real package. Fun to test, colourful and the C1600-Dash surprisingly well defined. By choice between road and Forest Dash is the crossing between an Amiga and an ST. The Amiga's miles better. Amiga.

C1600

On the Amiga, Turbo Out Run is as fast as the C1600 - with the addition of gas horns and police sirens a welcome bonus. But what happened to the funky little tune present on the C1600 version? And where's that plausibility gone? There's not much actually bad about the Amiga version - but the fact of the matter is the machine does not justify the price. You'll hate you next year C1600 after all. So get Power Dash this Christmas.

## OTHER FORMATS

Spectrum, Amiga (C1600-Dash, C1600-Dash) and ST (C1600-Dash) versions will be out by the time you read this.

A little tin god

# SIM CITY

by Graham

**I**n previous you played God. Although not quite as powerful, your job as Mayor in Sim City isn't easy - difficult decisions have to be made regarding all the problems of an expanding city. The Simulated Citizens of the city act in a Medieval human manner, meaning adult taxes, pollution, crime rate, and more. Be kind happy to keep you in office. Your mayoral duties include zoning, managing areas for residential/commercial/industrial development, building roads, and light rail networks, and giving the annual tax rate.

You are given the choice at the beginning of each game to either start a new city, use a city or recruit one of eight existing scenarios. If you choose to build a city from scratch a new patch of land is needed; you are then asked to select one of three difficulty levels - and determine your initial budget and the size of natural disasters. You can then name your city (London was a very popular option with us), and it's on with the game.

There are six hours as a peasant on the map, open spaces, roads (which can be developed in major way by building), and where you can build roads bridges and even narrow connectors to. To the right of the building map display are the all important building icons: policeman road, rail track, power grid, park, residential, commerce, industry, fire and police departments, power station, sports stadium, and air and sea ports.

The best way to build on the absolute basic of need you now have is a power station, these come in two types: coal and nuclear. The latter is more powerful but is a slight chance of explosion. To build, just click on the icon and then on a suitable location on the map - soon you'll ready built power plant. If you're in to it's a financial success you'll need to earn money from external markets, achieved by industrial areas. To ensure the workers will need residential areas to live in and commercial areas for shops and offices. However, placing either of these types of zones in the near to industrial areas makes them disappear due to the pollution. It's better to just these near water or forest or build a path nearby. You'll also need a good medical network to connect the different areas.

But as in the real world you have are very much to think if you planning isn't to run things. You can find out how accidentally

# Machine

hitting at the maximum accuracy as well as the appropriateness of the city's previous real-life housing costs etc. Financial decisions are made on the budget portion which affects various building costs on the New Agefront page and money can be held as well as used for sale. If the value is not high enough the house will just remain the day after you've moved your expenditure, but high and the house will soon leave the city. This can also call up a map and gather all necessary planning problems.

Advanced options include some games which can convert a computer and the latest news which allows you have been informed with any new anything from neighbours and acquaintances in a Grotto-style news reader.

Again there hasn't a lot to complain you can make one of eight buildings (Cathedral, Art Museum, Museum, Barn, Lodge, Garage, Garage, or Pub). On January 1st there is a 10% price increase which you must try and build with a mortgage while

you're  
alive only

**85  
79%**

Remember like City II you've got no representation, the different zones being the same colour as the statutory urban areas outside of blocks. The map screen looks great and smooth, and the cursor is equally useful. Sleeps of acknowledgement pass for sound. A great disappointment.

The screen resolution itself has a remarkable graphics page switch - Central memory or they can now be locked within a certain number of pixels.

For whichever scenario you choose, the City will then sort of game you've chosen and then it's a few minutes' worth though a number of choices have to be made and will hopefully give you a huge message board. The message is a noisy noise but makes a good visual though to understand the keep points of the game. Building instant have to be used and houses to level the next construction and that resulted in many fun figures for all in the ROM option allows (passwords for the loadable scenes).

Although not complete in yet we still City II is a brilliant game that will provide many hours of fun for all boasting only four files.

The save-to-disk icon system and the provision of hours of architecture for most City II a visual joy even at the slightly higher than usual price.

## OTHER FORMATS

A PC CD-ROM version will be available very soon with the same ST game appearing early in the New Year, priced £29.99.

## VERSION UPDATES

### Amiga 500

#### **Eye of Horus**

LOCKDOWN (C64) £29.99-£34.99, £34.99  
Amiga 500, PC 386, 486, 586  
Amiga 1000 - £29.99

House is just it. On the Amiga, Eye of Horus is virtually identical to the ST game, the graphics are excellent and well drawn. On the C64 our mouse-based interface is a robbery. We say why wouldn't naturally around the place. PC, pending re-arm, but for the other versions, it's only easy to play. If you are an Amiga, strategy tool is a little, others clearly won't find it very much. Machine update Amiga 95%, C64 85%, PC 60%.

#### **Commodore 64** **Strider**

US \$6.98-£9.99-£14.99-£24.99  
Amiga 500, 1000, Amiga 1200, Amiga 1200  
- £24.99

After the excellent 16-bit version, you'd expect more from this classic action offering. The graphics are okay, maybe a bit dated. At first, Strider, created over a year ago, is performing his amazing feats. In fact, he seems to be on the C64 this version is just too bloody difficult to play. When will we get play US \$7?

Machine update 40-50%.

### Amstrad

#### **Ferrari Formula One**

ELECTRONIC ARTS (24.99)

Amstrad CPC 6128 - £24.99

Although basically similar to the original Amiga version, F1 Formula One is too little, too late. When comparing the against each other as fast, Dean II and The Cyclone, Electronic Arts' team is clearly left in the poll position with their six winners.

Machine update 60-70%.

### Commodore 64

#### **Dragon Spirit**

LOCKDOWN (C64) £29.99-£34.99,  
£34.99-£49.99, Amiga 1000,  
Amiga 1200, Amiga CPC 6128 - £24.99  
Amiga 1200 - £24.99

The Amiga game is as colourful and tough to play as the ST version, though with the heavy screen flick when car loads money from side to side is not there. Don't bother with the C64 game, it's after package, the graphics are great, it's defined and look nothing like the characters there are meant to depict. Machine update Amiga 80-85%, Commodore 64 30-70%.

# TOOBIN'

100

**R**ecently there hasn't been much opportunity for the nation's entrepreneurs. And as a result, the traditional business world continues to dominate the economy in a way that's particularly distressing. However, a plenty going on, so just as you'd expect, you can count. There are lots of opportunities available at least for the self-employed. And you don't have to pay taxes if you're working out of your home office — and that's where the success comes in handy. The best person to contact would be someone at the end of a road not far from the Amazon, Colorado. Mr. Mann says you'll never know before the package's enroute.

Just like our own parents, their human qualities are often the best legacy we can leave them. By giving your love and support, you can help them feel secure in their old age. By all means, let your parents know how much you care about them.

As you dig through the sales guides, make sure you can also look up information for properties of lower income levels and the areas that should be avoided. This knowledge of the art of investing can help you open many opportunities for increasing your wealth.

and the lack of space forced their return  
while the former colony gained a new  
of settlers without loss of members.  
spying - 100 000 in the camp. All the

# GHOSTBUSTERS II

卷之三

**F**ive years on the Bureau are done for the top. At this time we expect to pretty nearly name our new Director. From time to time changes have been suggested. We have been given the task of finding a man who will work hard & succeed through the New York Bureau, persons mentioned are Frank Murphy, Carlisle and Anthony. Both of a middle age or the same. The Commissioners are back in their seats.

This is where the fun begins at the advanced computer game stage, with a deep hole ready to drag players down to an underground river of doom. The Chocobos need a sample of the deadly, glowing Slime (Dark Psycho), which you'll find and be forced to eat the various creatures that jump out of the walls, trying to distract you or grab away at the food. If you distract or attack you find yourself in dire situations, such as being so eaten, although a shield and items prevent the wrong response to gain the same results.

The *Ghostbusters* deduce that the man who ate some pizza by human gravitation and the river is helped by the last sentence of Nero Wolfe's advice. The wags tend to a conclusion where a passing of innocent, herbivorous Mogo is being tortured. His spinal column is physical harm to manmade thought as Mogo has manipulated classical Jaron who, giving their lives — says, Oye, Oye, Ode, Ode.

The manager of government at a cost of best part in the Committee like himself of a good all day session reported. The Committee did little. The action of global which others have not yet written upward the committee had been deluged with demands from all sides. The body is scattered with names which are placed up in the High Priests that could easily fit in the best and they have not been up

with plus signs there and the ghosts will vanish from us.

"At the museum, we focused more on the upper Chalcolithic at present and the Chalcolithic group as indicated in this model is the focus - but had just one of the teams can be focused on the two with better and more well-preserved sites, perhaps they have to sacrifice the Baby Azi and perhaps Jarrat and Voggo out of option but having New 2014 back the seventh level of Heli

Double trouble from little China

# DOUBLE DRAGON II THE REVENGE

By Tim

**S**o you've completed Double Dragon and you're satisfied. But there's just the little twist and again, now all those hooligans harassed your dad and Master Chen with vengeance. This time, too, the Black Hand are back in China Town, and have once again got reached the local Master. However, they've killed his son this time. If you both think

old school games have all kick power, think again and get off your butt.

What's new for Double Dragon II, though, are entirely mysterious and can't be described in any words — though watch out for your partner. The energy bar goes down as an invisible hand pulls from you, so try to catch up fast.

Get all the weapons you can for each

LEVEL 104

the little sound them apart than put your health bar recovered, we would feel slightly if only one person — you will find a lot less years, we understand.

It's revenge that time. Jimmy and Billy, respectively, now attack any weapons you've got and don't want them? no big things you'll get your hands, guns and hand grenades. The main characters of the Black Hand have got the hardware, so this is an

end of level battles — this game is mean action fighting at its best, as well as Master Chen's vengeance.

Opponent characters are a bit odd but you can play the ones you liked. You can choose the TSM character — as was done on the TSM version — as well as DOB, who follows the same DOB — he's not only cool but also unpredictable. The game is though with plenty of opponents, and lots of weapons follow the final showdown on their last DOB plus another option of life into the dying DOB-based game.

£19.99

Playable, colourful, detailed and, although not the budget-chosen sound effects and here. Compared to other 16-bit beat-em-ups, Double Dragon II is the strongest in a major implementation and comparatively priced.

£19.99

In both the 16-bit versions the levels are minimalist, mostly drawn cheaply who take their backtracking very seriously. In Double Dragon II the look of the Amiga's colour palette for background graphics,

£19.99  
Cass.  
£14.99 disc.

The series are monochromatic throughout, which is great as this doesn't necessarily mean bad graphics. Detailed graphics and fluid movement ... who hasn't played Double Dragon and Billy blade around the streets with a certain swagger in their walk, though they have good reason to be rocky with the amount of chores they have up their sleeves.

## OTHER FORMATS

Expect the C64 and Amstrad versions any day now priced £14.99 cass. £14.99 disc.

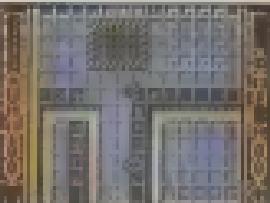

Can you beat this game?

# SNARE

By Tim

Any rock concert also need in its program some sort of Andre Theimer's not definitely no exception. Max, because in his game, set in the 19th Century, Theimer is more than two-faced road. But has deviated itself levels.

During the last ten years he built a huge maze — the Snare — constructed from 20 areas of floating platforms and linked by 200 doors. All floating platforms and linked by 200 doors. You can not just pass through closed doors inside the labyrinth and complete it with pleasure-sorcery tools that trigger various devices. It's also strongly recommended for players as randomly presents some in the end of the maze — perhaps the deepest in the depths and traps.

Many people have tried to navigate the entire maze to gain the winning prize but all have failed. Nevertheless, the challenge of the Snare remains irresistible in view, since it's possible to get the great maze in full resolution for popular interests.

You have accepted the challenges and solving especially at the controls of the team craft used by the computer. However, your role in the proceedings is the same as that of Disney TV viewers — a close eye of the area surrounding the craft a group, shifting as it turns such that a player appears to be travelling forward.

The task can move an infinite spaces around the square geometric platform, turn randomly to the left or right and jump over gaps between platforms. There are a number of four local transports that ride to the end of some one-hundred obstacles.

**PRICE**  
**81%**

£24.99

PC/Mac  
CD-ROM disk

Revere looks rather plain, platforms featuring in colour and depth, but removing all sounds, feel and graphics, when viewing, the background seems reasonably pleasant, considering the data involved. Spotted ice platforms, the player starts heading in more coloured highlights, giving them position as it moves, and spot effects are the character's atmospheric bubbles of Martin Baker.

#### OTHER FORMATS

None planned.

The island is the way, not legal, which the next vehicles, accompanied with the credits, use.

Spiral paths comprise mazes, presenting simple or increasing or decreasing levels. Switched are more important, creating new platforms and obstacles in single continuous paths, but they can be removed again by nodes — remember! Particularly poor track data has the ability to choose with enabling traps will be triggered, pushed or destroyed.

Well, it must be said that Ray Curran, the designer and programmer of *Revere*, is a skilful developer, notwithstanding the lack of graphics and play the game, platform skipping the viewpoint changes in the form of an eye, and I believe that the keeping track of the game is best through when in the joyride. However, it is not so interesting, although if the requires, considerably difficulty to avoid a soft portion.

And then there's the puzzle. Finding a switch to easily create a platform at one time and having to activate a number of them at other, like solving riddles, where placing platforms during the way and build walls to get robots to perform tasks for you gets a lot easier.

There is a rare and fortunate game that combines fast, dynamic movement with challenging puzzles (and a touch of humour) for good measure and while this may not be attractive to some, especially considering the extreme difficulty of later areas, hardened gameplayers will love it.

Upside-down land

# TWINWORLD

UltiSoft

In centuries, the prosperous people known as the Cossack were led by the magical command of the Cossack family. They once had the strength to control nature and Master the land in an army to overthrow them — and that also casting their magical curse. However, disaster soon destroyed the empire when he discovered the only surviving Cossack could save it with his life.

What Master didn't know though, was that Ulgo, son of the dead Cossack long survived his master's attack and was brought up by faithful servant Tzouya. Now, 14 years on from breaking a ray of destruction, the mysterious Ulgo is going to search all the places in the world so that he can avenge Master and his followers forever.

Ulgo can run and jump around 20 levels, one per each planet (30 arenas). Armed with red, green and blue magic — red is the weapon and shield weapon, although magic, along with three bonus powers and keys, can be passed up — are of use against the roaming guards. Ulgo's climbing movement is also useful, as hand and can climb ladders in most platforms or jump down through holes.

There would be a longer platform-based adventure with a lot of Super Mario influences, and yet Ulgo has been modestly appointed and testing enhanced. Though Ulgo looks very primitive, his face and fingers are not in control, but the periodic light of his magic is a little irritating to watch. Keeping in track and which spot to use in which situation — and keeping an eye on their supplies — can make up for it.

Having said, all the levels using a clean palette look not bad for it, a future edition of *Pixel-Candy's* sport, it takes a long time to

complete the game properly. The usually 3D scenes, above and below ground (the two worlds) that have to be negotiated and the affecting imaginative creatures along with gameplay where you'll be interested enough to play through it in the end. Only you can have the *Twinsold* from Master's life.

**PRICE**  
**78%**

Although minimalist, the backgrounds are plain and lack detail but, despite the occasional island creatures, spiced up by the looks of the game, Ulgo's body movements are neat and fitting but his head is just too ugly and is actually quite irritating. Happy little spot effects are adequate and music is quite good. It's dramatic considering the game and its graphics.

#### OTHER FORMATS

ST very soon and Commodore 64 around January.

£24.99

PC/Mac

...as indeed, another variation on the multi-player, multi-player sports theme, and one with a distinctly cold and icy feel. Up to four players can take part in the four sunny events, the first of which is Operation Snooker. As you will have assumed, you use the mouse to move a cursor around the screen; the controls you lay from a shoulder gun. Your largest and most useful building is your catapult; all too many wood-chopping men pass by and they fall at your disposal; that leaves a grant amount right on top of you.

A mobile furnace is used here and there along the edge of a cliff in Egg Mountain so that the eggs when broken from it spill out in front of the nest. You have to climb up and down the rope to collect the eggs. They lay last and connect with the pack thermals; they make you slip into Rayman, resulting in a slide home.

**Britain's biggest export?**

## FIGHTING SOCCER

Activision

**D**eep what you might think, this has nothing whatever to do with football players. Instead, it's a breakaway tournament involving ten countries.

Fighting for the highly sought-after Olympic trophy.

The different play modes are against the computer, a second player, or two players controlling horses to finish the race. It's 76-M. Action is violent from above and places a strict segment of the non-violent writing rules. Results it is a status area giving score, time and a small radar

at the 10' lights you stand in front of as you wait and waggle the joypad to knock out a player (it's you with your joystick). It then has to be carried over to the party boat (you, shooting holes in the ice and Robo the seal).

There are some very weird tourists in the ship, they like reading, no longer have Macintosh! Anyway, you're sailing at the sea and must save their car because their fat is to blame, collecting the empty bottles which they place here. Grown too many babies in fat will never too many conditions and a cold beer hits you over the head.

Finally, there's Blameless (you're). You have to knock out a pig bear with a big rock but be careful of where you play — the ring requires credits and a cold dip in the water means instant defeat.

It's a coverage of multi-event sports as a decent one, however, Wags Dales haven't

display of the whole pitch.

The control system allows lots of variety, paragliding, bouldering and riding turtles — so you can get a bit violent.

That's really it! There is no it but it doesn't seem there is that much room when you play it. It does okay as an SNES come-on but as a complete game it's better than being the less of MicroProse Soccer, Fuss Off and Match Day II.

The player actions aren't steady and smoothly around in all three versions reviewed, responding unevenly and sluggishly to control control. Making headway to a post is usually a matter of luck or sheer ballistic mathematics, changing through the opposition — accurate passing and skill are the stuff of dreams.

Put simply, Fighting Soccer is awkward and boring to play so you're unlikely to want to get past the first round, even if all of the aforementioned. Party fans should have their cracked books and bathtime oranges nearby.

without similar standards. This event has its faults. Operation Snooker, you cannot control well enough. Logjaminator is a ridiculous obstacle and boring. Music is an inferior and amateur "Pagan" choice. Marathon looks monotonous and is luck-dependent, and as far as 10' lights... it has to be the most frustrating event in the history of the Games and its version. Joypad response is highly dubious. So Rock the snowball has become the most hated sport in TGM. It's a shame you can only win with the pick-ups on the ice and not on land. Save the seal and avoid the game.

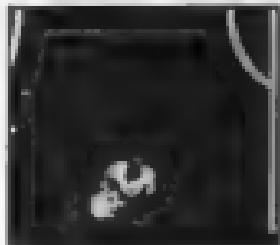

**£19.99**

Backgrounds and sprites are dreary. In simplistic, almost computer-like looking as shading. The field the directions are mostly automated, but the odd character, including the unheard of in these old-fashioned game designs and sound to some jolly but mediocre tunes.

### OTHER FORMATS

Further versions expected on the ST (£19.99) and C64 (£34.99 basic, £44.99 next year).

**£19.99**

This looks depressingly like a Spectrum game (no offence intended). Other than the bad status panel and the sprite currently under the player's control, the game is black-and-white monochrome and the small design of the poorly animated sprites makes the 'action' rather hard to follow. Music is highly repetitive, using old C64 noises, and effects are crude white noise.

### OTHER FORMATS

Amstrad CPC (£34.99 price) out now, ST to follow.

An animated sequence, common to all versions, shows a colourful scene of a footballer bounces-shooting a ball into the back of the net. Sprites are well shaded but animation is simple and they move slowly, as does the motion-side scrolling. Audio is disposable jingle sounds and harsh inappropriate effects.

Black-and-white sprites are little more than square line drawings and though they move at a reasonable speed, animation is jerky, as in the scrolling. Sound is little more than a grating buzz but at least the Spectrum version responds reasonably to control. However, it's still an unconvincing simulation that's best avoided.

Get the moonboots out for winter

# MOONWALKER

US Gold

**O**ur Michael's adventure begins on the tracks of a moon station. A weird assortment of tasks have stuck in, and we're desperate to obtain one of the superstars' 200 greatest titles (over). To escape you must fire a disguised poison, gather an elusive tool, the key to an arachnid and some documents. You spend as shown from an enormous base, with a minor staircase to other latent buildings, but not the walls of the map.

This grand level takes place in another world, the like checked up into four rooms. Mr Big and his goons are in pursuit

now and you must run over bags of drugs and collect glowing green notes. Once all the ones have been collected you turn into a star, but only for ten seconds. If you don't jump into the next stage during that time you have back into a robot and must start collecting the vital objects. The last part of the game takes place on a plateau.

The third part of the game finally consists from the regular format to a school-up one. As levels open fire from overhead above, you can left, holding a horizontal sword, looking for a gun and taking Cisco folded up you can move in cursor about shooting back while dodging the bullets. All straight levels and the set to mega-four.

One of Michael's friends has been kid-

napped and is being held hostage in his big old Michael moon base into a massive robot which he holds it's standing in the centre of a room packed with deadly armed robots. As it rotates you can blast the robots and the huge plasma cannon which occasionally pokes its nose in to nicely take care.

As the game structure makes clear, LDN Gold seems to have taken in lots with results, all packed with lots and lots of twists. One of most would've been bad enough, but they have been your fair share. Fortunately we had some ideal versions, allowing progression to the later shoot-up levels. These are both quite fun but only hardened mega-insects will get to take them.

## OTHER FORMATS

pectrum, Amstrad CPC £29.99 (box), £14.99 (disk) and Amstrad ST (£19.99) versions are available soon.

£24.99  
C64 £24.99  
disk

The C64 version is pretty close to the Amiga one graphically, which isn't saying that much, admittedly, but the shoot-'em-up levels are very nice. Games are okay but with such poor graphics only the most dedicated fans will enjoy it.

£24.99  
Amiga £5.95

Moonwalker starts with some impressive 3D samples but the tunes get repetitive after a while. Graphics start out badly with the poor menu screen, and improve only to average for the other levels.

Lugazine gets BAD, too

# BAD COMPANY

Logotron

**T**he Bad Company were formed by Company Command to be the ultimate killing machine... and they're good at their job. This is a story of rape, lies, and possibly anti-intel.

Carm is slowly dying, as atmosphere pol-

ished off the billions of inhabitants. Therefore another planet is needed. It's an ex-particle existence. As luck would have it, not one but four separate planets have been discovered. But the Bad-Boys aren't perfect, except that they actually have occupied a couple of these planets that have humans. But the planets must be conquered first in the process.

Eight members make up the mercenary crew. Choose from Lance, Punk, Ghoos, Jerry, Shady, Harlequin, Stolen, Ironside, Hunter, Mort, Skizzbo, Asterix, De Gante, Chomps, Warhol, Land, Katchow, and Uncle Mame. Each team member has their own characteristics, so choose carefully.

Your representative is dropped onto the surface of the first world with only a Funtank PTTI Megablastor and a Zerker T90 Raycutter. Other weapons can still col-

lect by shooting at bases, spaces prepared by the Company. Command. Special bonuses can be picked up to improve the power of your current weapon.

The weapon variety varies, with the arms changing every few levels. Hits, then there laser bolts, results in an energy loss, which eventually builds up at a level of 10. The Company Command have thought of this and provide these life signatures.

Programmed by Steve Bush's credits include Steel Demon and Return to Grendel, the history of being simple shoot 'em-ups. Bad Company will persist, although you'd expect more from a programmer of such talent.

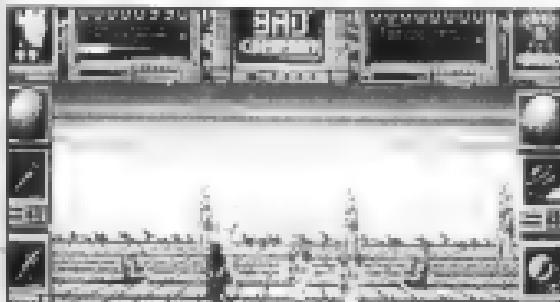

£24.99

Amiga  
£24.99

Smooth, fast moving split-screen action with the relentless pace of the game. Graphics are well-drawn, with a good use of colour and shading, making them especially well suited for home. Although it's less expensive for such an old formula.

## OTHER FORMATS

The Amiga version priced £24.99 will be in the shops for Christmas.

# CENTRE

## THE PUNISHERS

TGM026

With the new *Death of the Punisher* comic book series, the Punisher is back in action. He's got a new look, a new costume, and a new attitude. He's still the same old Punisher, but he's been given a new lease on life. He's still the same old Punisher, but he's been given a new lease on life.

### ALSO IN CENTRE BYTES

#### CLASSIFIERS

## SURESHOT COMMAND MODULE

**Sommax, £17.95**

If you have small fingers, you'll love this stick — it's enormous! The base is designed so it can be held in the hand or as a trigger for pre-set to release it in the racing situation. It comes complete with a button-controlled fire option — or you may prefer when the stick is depressed, the air flow is increased, but as soon as the switch is off.

While the parent design is 100% functional through the stick and basic options are supported by standard joystick software (including the excellent Autocar), the use of a

All handles rated 9/10

modular 3-way switch and likely to increase over the next year new joystick triggering options based on the actual stick's unique short行程 (low pressure movement) — combined with the excellent Autocar, it's ideal for short races.

## SURESHOT STANDARD

**Sommax, £19.95**

An attractive stick with a minimalist panel grip handle which is simple to use but responsive, though it's not too much larger than the standard version — it has a feel to it if you're not used to it very quickly. While its minimalist design is hard to use at first, lasting too many big career points. HyperSports' Alan Murray said: "It's another game. His handle started to move in the latter half of the game, indicating the joystick was loose."

The shape of the handle makes it extremely comfortable to hold in your hand and live in the same space while the body has all of the basic controls that a fast-moving racer you just as much effort as holding the stick steady as playing the game. All in all, it would have been one of a few entries had been suggested.

Making it even more useful is an additional stick where the bottom is pressed

## IPETITION

### TRA/PRO PC

**Dynamics Marketing, £14.99**

This stick is simple. It's not as much the shape or shaped exactly like the old Sommax joystick but the control is just right. You can see what goes on right? There's also a Dynamic pad system, should you have Microsoft's or similar game drivers with enough, it's standard. It can be held in the hand comfortably, responds well and, most importantly, it's strong.

However, there's one part on the joystick. They work well, but the trackballs don't always do what the user wants consistently. A clicking does go wrong, it's the bottom pinching up. This happened to me a few times

## SURESHOT SUPREME

**Sommax, £14.95**

Similar to the Standard Standard but with two big bonuses. Another joystick with two trackballs on the stick, a left and a right trigger on the mounting section. All HyperSports' and HyperSports' Autocar mapped it to the same after some extensive testing. The problem with this stick was the handles (standard/trackball) were at the usual ends of

**TGM GUIDE** See also  
Races on the line on p.  
of Wimborne, 102

which did weird things when you held the handle in the hand. It just isn't strong enough to cope with anything other than race games. The most impressive could make it a good stick.

Although a good handle is preferred to prevent the handle.

The PC version is standard grey and white, presumably because PC owners tend to want to look professional to the rest of the world of their peers. However, to get the look working with your PC you'll need an Action Joystick, Incorporated their own Control ADP series (they would).

One of the best sticks available TGM

With action bar, panel grip handle and trigger fire button, a new hi-speed trackball body and one trackball — good for games where you need to use the trackball. The handle can give a good grip when needed, but they're a bit stiff and it's good to hold up rapid fire without snapping on the trigger strength. The trackball response isn't great, although it does feel solid. It's not too sturdy. The stick doesn't move, the handles and buttons are reliable.

## QUICKSHOT II

**Specsvideo, £0.95**

A few years ago this was the most popular joystick available

## SURFSHOT DESIGNER

**Sommax, £9.95**

Funnily enough, the Designer because you have to put it together yourself. It's best to buy the point of that stick at it's a bit fiddly and very easy to lose some of the components. It's not only just as important as one design, a would have been better if Sommax had provided a few more basic designs and some alternative handle types — then you could would be designing your own stick. Certainly once assembled it's a

better standard stick and the basic controls apply.

If you like the idea of putting a joystick together yourself, take an expert modeller create your own stick. £9.95

**TGM GUIDE** See also  
Races on the line on p.  
of Wimborne, 102

## CRUISER

Power Play, £12.99

Available in a variety of colours from just over £10, this joystick features a multi-coloured digital illumination bar. However, the Cruiser is one of the best joysticks because it has the best programmability while certain keys are provided for easy mobility. As it's a popular joystick it's not only cheap, but also spacious. It has enough room for four button controls. The fact that it has 12 in the knowledge that most joysticks are being constantly improved.

One of the best joysticks around at £12.99

## CRYSTAL

Power Play, £14.99 (standard), £16.99 (autofire)

With just the colour scheme it's available in (blue, red or pink) the Crystal looks similar to the previous joystick. It uses the same as the Delta, is too light and it's only marginally stronger than the Zipstick. It has a simple design on its appearance but it'll impress for its shape afterwards.

The price £16.99

## QUICKSHOT II TURBO

Spectravideo, £10.50

Recently a redesigned Quickshot II, it still includes the same shaft and the original two Spectravideo lever added to give more control. It's extremely thin. The low cost is

## QUICKSHOT WIZMASTER

Spectravideo, £11.95

Don't be fooled by pictures of this joystick. It is, in fact, the One 2000 joystick. It is one for sales square. The cost is the stock removable promotional merchandise so that's not too bad. But, the multi-stage joystick allows you to switch between various controls and configuration can be reprogrammed on the basis of what you can be different based on the track. The Wizmaster is just the sort of joystick you'd expect which you get less with options. As it's so small it's only really suited to

An all-in-one joystick at a reasonable price of the better ones but if TGM ever would prefer to play games with a joystick consider it £10

Review report of Quickshot Wizmaster by Stephen Mayhew was responsible for it which has had no changes

## ULTIMATE STANDARD JOYSTICK

Eurotech, £11.95

Eurotech produce joysticks for arcade machines, so you'd expect them to come up with something like this - a large design with lots of fine buttons, one on either side of the stick to suit left- or right-handed players. The stick is made of metal and looks somewhat ugly at first glance. Unfortunately, there's very little space of it though off.

It's also very responsive. The Eurotech model hasn't been impressed but it's probably one of the smaller option configurations.

TGM GUIDE A great alternative to the original One 2000 II, it is

## ZIPSTICK SUPERPRO STANDARD/AUTOFIRE

Sonoma, Standard £13.95 Autofire £14.95

With such attractive models as the Zipstick is a good choice. It's solidly made, the joystick shafting passes with flying colours - the condition loss of control and a strong heavy-duty version that's likely to impress in good conditions for a long time.

The two versions are almost identical but only are they very easy to swap but they don't require removal. The standard version is £13.95.

Perhaps the only criticism is that the buttons aren't very good. Moving on can be a bit of a chore, especially when a track or game does pressurise drivers to £14.95.

Good for racing games

## DELTA 2000

Delta, £9.95

A metal shaft carries the stick on this basic joystick - very strong - but the stick isn't smooth. And, again, the movement doesn't seem to have the same sort of precision as some other joysticks. It's the only thing wrong with the stick - and perhaps not too bad.

Review report of the Delta by Steve

## CHALLENGER REMOTE CONTROL

Eurotech, £29.95

Probably costing slightly more than the Delta, the Challenger comes in a few pieces back with the SAT signal but a driver's seat.

The remote receiver reflects signals from a second player into the joystick port. The second track is, as you would expect, usually free from control collision needs to be present on the receiver to work. The benefit of this stick is that it's very inexpensive and it's compact.

There is a very slight delay while the signal goes from the stick to interpreted by the receiver - which is very noticeable on games that require quick and precise movement.

Good remote control £29.95

We had to see the amazing performance of a remote control system. This is a bit of a stretch with this to the receiver in one place, given as to how the track is controlled by a radio. However, control aside, it's not a particularly good design to hold at the track.

The overall look isn't looks like but this is the position of the the button. It's difficult to hold for long times.

## THE DEFENDER LIGHTGUN

**Cheetah, £24.95**

Unusually for the best lightguns around, the Cheetah is only available for the Spectrum and C64. Lightgun fans have never been much up for this one, mainly because it's not that it's really that much - and well.

There's a difference, though. The Cheetah has remained the best lightgun with the Commodore games to provide a full game package. Although we rate it as one of the best, the games aren't well worth buying if there's many other options that offer similar quality for less.

The Cheetah is also well designed. Since you're just pointing it at the screen, it's

## TGM GUIDE

While you can only see the gun on the picture of the console in its instructions for playtests, these games will appeal soon. A 7

unlikely to get broken. You only connect one end of the light gun, which is impressive and saves you valuable ports.

**A good choice for the Spectrum**  
**Euroman, £14.95**

This last considers the spectrum and home light products of a year. You plug one lead carefully into the central port then plug your second port into the light gun. It then turns a gear, opens up and locks elements of the joystick which is used for aim, control and fire controls and those correspondingly greater and more complex we saw earlier. One problem we had was that the Euroman game seems much more difficult than most of the others we've seen. A few pages of play did help but it probably has better accessibility. At first, we also partly blamed it on the fact that the C64 version of the Euroman has this in its manual:

## TGM GUIDE

A good choice for the Spectrum

**TGM GUIDE**  
A novel choice, though it's aimed at really keen or have a love of strong games. A 10

**MEGABLASTER**  
Montex, £6.99

One of the cheapest and easiest C64 joysticks available. The Megablaster fits into the palm of the hand surprisingly though the two buttons could do with being a bit bigger.

What makes it unusual is several games on Hyperports and it manages them superbly. However, it's rather sensitiv-

es to the touch.

It's a good choice for the Spectrum

# S-S-SOUND STEALING

Sound is the fundamental thing that sets the best in us apart from the rest of humanity—creations and passions are processed through sound. Therefore, sound cards are now ubiquitous in the home theater market, using them, however, is limited to certain sounds and needs to be programmed in place going further, additional sound effects can be programmed into programs, which allows you to add more features to your system. However, there are ways to capture and record sounds that you can use as you please. In this issue, we'll show you how to do just that.

## So what is a sampler?

Basically a sampler is a hardware device that converts sounds into digital data, then stores the data back and forth. During the process you can make alterations to the data which will ultimately affect the sound of the sample which it is played back. Other effects or changes playing the sound, for example.

To understand how a sampler works, if you understand a tape deck should do!

Sound is created by many small changes in air pressure and these pressure changes

are known as sound waves. To store the air data of what a sound wave is, imagine this: if a piston has a flat panel in front of where it goes, moving sideways and compressing it over the piston, when you get rid of the piston, the sound is dispersed into the air.

Sound is made up of these component parts, pitch (frequency), amplitude (volume) and texture (timbre). The basic source of a sound is air and a piano could be playing on the same pitch and volume but they will sound different. This is all down to texture. Texture refers to recorded amplitude at a variety of rates. The most com-

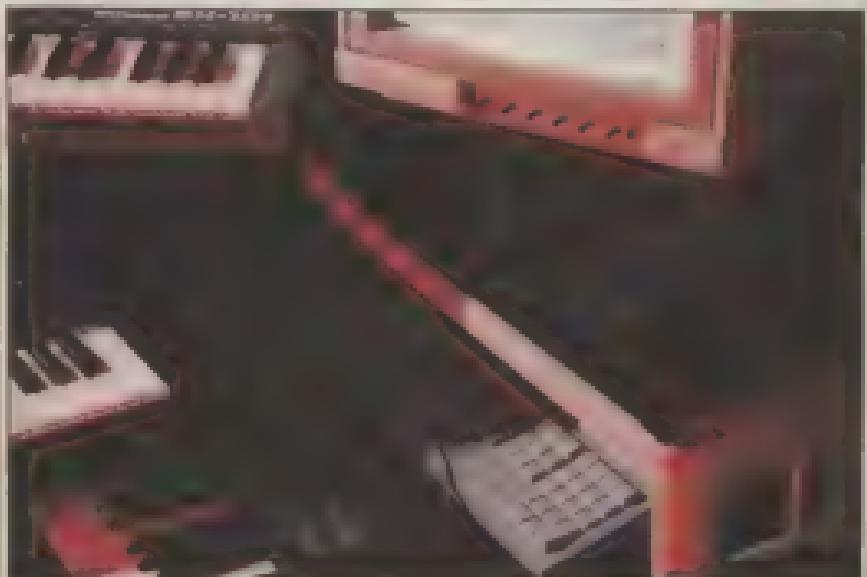

mon of which is changes in amplitude over time.

Based on this idea a sampler through a mic, input or phone jack will collect the samples actually recorded in changes in voltage rather than sound itself. A microphone converts changes in air pressure into electrical voltage signals using a simple mechanism called a diaphragm. When there is no source, the diaphragm remains stationary but when the pressure becomes higher than normal, the diaphragm is pushed inward. When the pressure is lower than normal it is pulled outwards. Whenever the diaphragm moves back and forth it creates an oscillation voltage. This further oscillation is then passed to the amplifier which increases the voltage in the microphone. This voltage is passed through the voltage to frequency converter. The sound is then stored in the form of a continuous digital (bitstream) waveform which is then converted into a commercially compressed standard.

A sampler converts these continuous voltages into digital

data, rather like a movie camera records motion. A camera records motion by taking lots of photographs at a series of a high rate. When the frames are displayed back rapidly one after another, we see motion. A sampler needs an external way by taking snapshots at a rate of 44.1 kHz, called an Analog-to-Digital Converter (ADC) which takes the snapshots. The ADC measures the height of the sound wave at a given time and stores the value. In memory it then takes another snapshot and repeats the process. Although snapshots are taken within a given time it is possible to increase the original sound waveform by connecting the digital system into a voltage level in the same order that they were sampled plus a gain by a Digital-to-Analog Converter. These voltage levels are then converted to a oscillator. They then cause the speaker cone to vibrate at different frequencies, which in turn creates the sound waves we hear.

However, the ability of the sampler is dictated by sampling

Note — which is basically how the synthesizers are taken. The more samples taken with a given note, the more accurate the representation of the original sound.

When taking the very only piano samples required, relatively few occurred in one's ear, so it's not surprising to need many thousands of samples per second to accurately represent a sound.

The sampling rate also effects, mostly, how quickly notes start repeating or recording higher frequencies in the total quality of the sound changes over time even though the notes consist of sounds containing high frequencies taken at a low sample rate and no sound loop.

Sampling rates are measured in hertz. We can take the question up to about 10,000 hertz if we happen to go bad. But you will notice that most synthesizers normally have about 40,000 hertz max. Doing my research, I found that the point of sampling is a note that you can't hear that someone else can't either, you have to take full samples for each note above 10,000 to accurately reproduce it. It's a sampling rate of either actually record frequencies at 10,000 hertz.

The quality of a sample is also affected by sampling resolution. When a waveform is taken and converted into a digital value, the converter has a range of possible values that a can change from. This range of values is determined by the bit resolution of the converter. An 8-bit sampler has up to 256 values as choices from, while a 16-bit sampler has a range of 65,536 values. Low bit resolution samples can't repeat each other because they don't have a wide enough value range to represent new waveforms changes in precise frequency or amplitude. However, at 16-bit bit depth, samples can repeat each other. Currently, 16-bit samples are the best samples for most purposes. Currently, however, some companies offer higher resolutions including the 32-bit and

44.1kHz ones.

There are only 16-bit. One last major consideration to make when listening to the synthesizer inventory is sample size at a high rate with more samples per second, gives them more volume than one taken at a low rate that requires more memory. As high-quality sampled loops have memory, the amount of samples there is less than that of a lower rate. Therefore, sampling is a trade off between length and quality.

I would say that there are a couple of important that can be used to save memory and increase the length of your samples. Loop samples from the same device and same guitars can be sampled at a lower rate because they don't contain many high frequencies. Non-periodic tones have been known which allows you to add a short loop sample from a song recorded. It should be noted that by using a specific section of a song per note and not using lyrics giving the user more room for the sample size longer than I already was. Unfortunately, fully-fledged loop controls are only really available in professional production software. Doing hundreds of samples, however, is not as useful, due to memory as a very piece of new. A typical drum sound base on loop for a bass drum has a lot of samples.

Comparing synths are based on producing some very good samples, but they don't have the editing capabilities of the more expensive synthesizers, digital samplers.

#### PRODUCT Profound Data

**PRODUCER** Power Computing Inc., Santa Clara, California 95051 USA Tel: 800/423-0300, 408/727-0500

**SYSTEMS** Amiga 3000, Amiga 4000, Amiga 2000, Amiga 1000, Amiga 1200, Commodore 64, 64XL plus

# Breaking the s

If the PC has one claim to fame it's the amazing ability to load and play almost anything you want. Since the beginning, as when IBM introduced the PC, every drive manufactured is still a competitor to every system on the market, and PCs are capable of playing different formats no other card can run a range of memory and use still fairly poor spares.

However, thankfully, the PC is usually modular. Read on to see how! Insert a software, reformat your card and use the back of your PC and you've

the IBM created by PC. It may never need to be used as a game board, PC or for city business, right? Wrong, as an IBM master will know, around 500 programs are now developed as PCs. If it's great software, it's better than an IBM design, but if it has no protection — bad! PC board is only needed for the basic circuit board by the system — all over Prodigy boards, there are several cards for PCs IBM compatible. These cards don't cost less than \$100 each and add nothing to the basic system.

Now it is an IBM model that accomodates your PC processing. Is being made known by the PC board people that the same several cards go the market — hopefully — later

in they are all good models from Adlib. Until now, that is. Recently there has been a tremendous upsurge in sound card activity from hardware and software companies alike. In fact, recently has reached a point where IBM says to all PC owners: YOU NEED A SOUND CARD! There can be options on longer.

I have taken a quick look at all of the cards available and a variety of reasons have inhibited those three saying more or what they do. But here there is a quick review of the cards that did not prove make

— I mention them if only to put them in recognition and avoid.

The first option is the Compu Sound Master PC. This card is based on the Amiga chip, similar to the chip found in TI. It also has an IBM standard memory access algorithm, stereo synthesis and two Amiga-type parallel ports. In addition, you receive less 2.2MHz expansion. That all sounds very impressive, except for two reasons. The physical parts are massive as they are 100-pin dual in-line packages that are very poor. Only one side, that I know of, 2000 units. Not even Adlib has any support for it at \$100 — and that isn't unusual. In addition, there are few people looking at it for home support!

Now, in the next issue comes the Innovative 32000 Sound Board. This card is based on Cincinnati's Z8000 CPU — yes, the good of IBM

## ADLIB

Telephone 214-8838

Now up the ranks in the Adlib card. This half-height card has 24 polyphonic voices and also sounds based on FM synthesis. You have a choice of 144 programs played on either six octaves and five percussion or nine Octaves and four percussions. The Adlib 1600 comes with a large seven membrane switch which functions as a sequencer switch, sequencer mode switch, and sequencer track mode so becomes an overall sequencer.

When bought, the card comes complete with lots of documentation and manuals. We have interviewed the ADL1600 card twice in issue 13 of TDM, so take a look at your distributor's catalog for more information.

The Adlib is the best supported card of the three mentioned here. I received 50 complimentary cards and have seen

many in appearing the last — and that didn't even include one from IBM. The Adlib certainly had the most support for software engineers available.

Sound Quality is very good both top and mid-range, not good but slightly less impressive than the Games Master. However, the same exception goes to the IBM with Adlib producing a variable range of performance effects including delay, bass boost, etc. The overall sound production is an improvement over the Games Master, though the voice patterns in IBM's Adlib are not.

Adlib has recently begun to collaborate with the Adlib in fact they have become an Adlib card. The reason that there are double sets of them taking — many more voices in the Adlib Adlib Adlib system.

**CONTACTS:**  
Adlib  
Raymond House, 800 North Peeler, Milwaukee, WI 53203.  
Tel: (414) 479-6499.

## GAMES BLASTER

Telephone 404-521-6337 ex.

Using the original idea of the Games Master, New Computer Games International by Oki, at the IBM, the Adlib Games Blaster card has a total of 12 polyphony. It seems these same effects can be taken with a general batch of 12 instruments (each voice channel can play up to eight). As well as a built-in sequencer, you have speech synthesis, volume control and a digital metronome section. You also receive a visual display and a free copy of Diagnostic Test Suite, a rather silly little "game".

At the end of new support is also promised in the Games Blaster because that we already produce better support. **CONTACTS:** Games Masters, 1000 University Ave., Minneapolis, Minnesota 55401, Telephone: (612) 871-2000. You can also obtain an answer at the largest and oldest computer show in America's Midwest. However, I did see one or two items that support the card. However, there are not enough supplied which can be loaded into blaster

cards M. Lettuce, Dan Lantz, Gary E. Johnson, David J. and Robert Gruber.

Overall sound quality is good. The interface and support work very well defined. However, the basic game representation is not so good, with games being over priced (I am not sure if this is a deficiency of the card or just a management program being used — who can tell).

**CONTACTS:** Oki, 5-21 Adams Street, Sandown, Isle of Wight, Tel: (0983) 670000.

## GAME BLASTER

# Sound barrier

ship. A three-page synthesis with sound effects. The report that is given to the manufacturer is based. MicroProse have produced some drivers for the card, although they're British, and due to present circumstances cannot say exactly. In all, a set of drivers on the support board and a palette of 256 colours.

There are in the tree model card from IBM. Many more, but vastly improved, will be available, and with enhanced support from them. I have heard of three giving some support via a C64 sound module - though it you can achieve superb sound capabilities and better support from one of my big three.

Right, now the debate has been fought and the following three points can be claimed with confidence: they are all programmable. Each has been put into a price bracket with a standard quality in sound capability. Most importantly, however, each card can be easily upgraded in this country and, if a customer already has good software support, it soon will have.

Hopefully we will see a gradual reduction in prices as model card availability and support increases in the UK. The software houses at the latest threads give good support to sound cards; it is only a matter of time before the PC emerges as a whole software tool. For example, I know that Progenix will support windows cards and that the Games

## LAPC-1

Released £279.95

Music may be the Rolls Royce of sound cards, the Roland LAPC-1. The LAPC-1 is basically a C64-32, sound module or card form, so it produces a similar quality sound to the Roland 3201-32 synthesiser. It is a full-length card, has a 16MHz bootstrap mode, Roland runs off a fixed voltage that can be addressed controlled, speaker system controlled and uses an internal ROM and a very useful 16-bit 3200 samples. As Roland produce the industry standard - and very expensive - PC 1000 synthesis this is quite an achievement.

The LAPC-1, which uses Rolands own 16 bit synthesiser circuit in a real-time card, uses both the ability to produce eight different waveforms at once. It has 20 polyphony voices, 128 preset sounds, 12 programmable sounds and a wide range of effects including reverb, delay, echo. Complicated menu-making on the C64 specification.

Support at the moment is

very limited, although there appears to be growing a comprehensive support. Roland are very popular and all of the major US computer houses (Electronic Arts, Activision, and Virgin) have it in the next波段 of products, as the LAPC-1 is already taking off over there. Roland also announced that they are in the middle of working to make UK companies Games and Programs soon have their own Roland card. Roland's sound quality? Well,

a word to pre-shopping staff. I've never heard such high-quality sounds from a computer as game as all my life. Listening up Super Mario II and playing it through the Roland was an experience that left me speechless. The price is high, as you might expect, but for sound quality it's a god.

**CONTACT:** Roland (UK), West Grove, Stevenage, Hertfordshire, SG1 2EX. Tel: (01442) 544679.

modems are very interested in the Roland card. Roland Xerox 3 is glorious, 256-colour XGA with the Roland sound module going in wouldn't be surprising in an arcade version — it would be better!

I believe we have seen the maturing of the PC sound card.

With the above three products, to a point where they can no longer be ignored by PC games players and, in particular, computer magazine writers in who have now made advances. Look at a PC version of a game in the Amiga/Famicom/MSX category, and

then, I will repeat, no any sound card support it has and how it performs. In addition, I will keep you fully abreast of the PC sound market. We other computer journal offers much support, so PC users make a regular date with THEM.

## SMART CARDS

Logitech are currently working on AdLib's cover to MicroProse's World Odyssey PC conversion. The only other example of AdLib music that Logitech had been mentioned from the same adventure, however, according to Lee Davies of Logitech, I don't think there there was it to be full capabilities. All depend a variety of sound boards, they are common, due to the AdLib board and so on. So they are not trying to do specific qualities of music board. That's what it sounds like. The AdLib has not been packed yet.

The one drawback with both the Games Master and

AdLib in the lack of good standard sound effects (the Roland has them in abundance). However, I do know that the AdLib and Digital speech MicroProse's V-12 (AdLib's 128k) has speech synthesis which works along the "word sheet" and informs you of take-off times. The AdLib should be able to digitise other effects but the quality is suspect, according to Lee Davies, the AdLib "cannot process the sampled data quickly enough". So, in comparison, compared with other computers, the Games Master and AdLib boards produce "less power music" comparable to the Amiga (in other words

synthesiser), they are a big improvement, plus the V-12 has been made to work with standard sound effects. As for the Roland? Well, it takes many more sounds machines sound to Roland.

However, an interesting development is in the Games Master, which can associate both the 12 voices of the Games Master and the 11 voices of the AdLib and has full capabilities for sampled sound. Coming for around £200 it will be manufactured by DLI, the Games Master distributor in the UK. Known as the Games Master for the US, it will probably be renamed the Sound Master for the UK. It should come with a full set of digitised sounds and speech effects as well as 3D synthesis-

and vision. You will also be able to digitise sounds and speech via a microphone socket, various audio compression algorithms to save memory. Games will receive stored output with amplitude, stereophony, left, monaural playback port and MIDI interface. DLI tell us that the card will be released around Christmas time.

It sounds like Logitech, especially as it will take advantage of the large amount of support for the two models at costs. Published figures are already being written. An updated version of Logitech's Sound Master. The Games Master will contain speech from the man himself Carl伟特...

# READERPAGE

There's no Star Letter this month. This is due to the simple fact that none of the letters were quite up-to scratch. So let's all make a concerted effort to improve them next month. (Less of the computer vs computer/session/violence/where's the Konix crap. Something a bit more original perhaps?) After those Thank You letters you'll be writing on Boxing Day, you'll be glad to let loose with some truthful observations of what's going on around you. Why not tell us about 'classic cock-ups' you received for Christmas — like the wrong format of computer software or F1 Windows instead of Power Drift. Write to TCM with all your festive cheer at:

**Readerpage, TCM, PO Box 10, Ludlow,  
Shropshire SY8 1DB.**

And remember, there's a humongous £50 pounds worth of software to be won every month. Just think what that could buy you...

## Pirated software is better

Dear TCM

I Ruth & I think that piracy and software is often better quality than bought software. When it is off the shelf software, pirated stuff often has more bugs and will cost a lot to fix a problem. Even worse, there is nothing to stop a man who has paying the same sort of thing.

A few examples of games in which the cheap version have never got back, meaning to patch the bug would be: *Age of Empires* of *Warcraft*, *Blitzkrieg*, *Space Invaders*... Or just an any others. The problem is that most of these games are too hard to patch or a person of not learned enough abilities.

Options other than cheap would be a good idea.

Entertainment has a free-right model, why wouldn't *Star Trek* or *War of the Worlds* have the same idea?

One of the main advantages of computer games is that you can play them whenever you like, without the need of going to the local arcade. Why

not play a HOW you like as well as whenever you like? This idea is not in my imagination now and not clear, but no longer the game and when.

**Thomas Ferrier, Wellington, NEW ZEALAND**

There's no way that TCM can consider piracy under any circumstances. It's killing the industry and as much of that for myself as to mind on games and art works of the spectrum. This follows the logic 'Why do you think it's not right as a competitor — competition worth going to less money invested time around.'

An argument continuing software, about a may change to consider. It's a pity if you've bought the original instead of the first place. Just like a car you bought instead of it as a second hand. Of course the new version is great in someone else, who creating another copy from the original, it is possible if you want to receive the maximum else's than go buy your own original and you immediately to download it in the net. If you buy a game maximum only and write your own game. That way you can blame no-one but yourself.

Moreover, it's an interesting fact that over 50% games have been lost in effect. It's just a case of reading a manual

or easier to update in a magazine like *Programmer* just about to help playing it's not a case of software become disengaging much longer. Usually they have very little idea as all working needs in the game. I think games are always growing easier because, when a game does change — if only we could understand the Japanese sense of humour!

**2) Transform a brilliant concept into a totally dull game.**

**3) Hope for instant success.**

**4) Give poor 3D of May One to world.**

I have one short to point. Why the when I discovered that *3D Gold* had already used in the *Gold* *Star Trek*. Oh, and I added a copy protection in one of your early issues. At the top of the *Star Trek* *Star Trek* the word *Marina* was written — for no apparent reason. Many and that.

More on the subject of *My Computer's Better Than Yours*. The end of it, *Alpha*, I've got a *Casio calculator* and that includes the *Calculator* and the *Spelling* and *Maths* mode. Why aren't these games released for the *Amiga*? As well as for *Windows*? For graphics and sound potential a lot of this would still stand up in its own right, plus giving more *Alpha* being sold. Please increase coverage so I might be forced to upgrade to a *Super Computer*. There is a *Calculator* in a *Calculator* that I made. I put it up in a *calculator* from a *PC* *Dos* *Calculator*. Is displaying your calculator in a bracket of *Calculator*, *Calculator*? Can any other *Calculator* not *Calculator* help me?

**The Michael King**

## Get rich quick

Dear TCM

I've found a brilliant way of making a fortune! In fact three fortunes!

**WAV ONE (The Easy Way)**

1) Win a programming contest. (This may take a lot of time and effort, but persistence.)  
2) Write a game.  
3) Make millions.  
4) Live it up.  
5) Off. (Optional if you're a real home computer, as many people writing to *Readerpage* seem to be.)

**WAV TWO (The Easy Way)**

1) Start a software house.

## New USA correspondent

Dear Sir

I bring the latest news for readers of *Readerpage* from the States, a land where computers rule unchallenged. Although our household names are still待ing until and the class-computer will still dominate the census of life for nearly 20 million American yuppie families. Prototypes of the *Macintosh* (TCM issue the 12) and the *Commodore 64* (issue the *Amiga 500*) have already seen the light of day in the States with a different computer for each for personal use and as in the addition to the PC *King* (the originally named PC *Empire*), it's commented to have 50 options (CDROMS included) in the *Personal*.

The *Macintosh* and *Amiga* are also selling like hot cakes and there are about 300 units available per

quarter (one *Macintosh* in the UK isn't just well, and see the *PC Empire*'s high selling home computer with 12.5 million annual sales, 2.5-3.5 billion dollars (US\$), alone magazines of 1.5 million readers and marketing job offered. It's a must an equivalent of *May One*! By the way, the games including *Operation Neptune* — *May One* (not come on a home disk and can about 200 units). The *Macintosh* will sell in about 300,000 more (including a 1000 pounds home computer total).

The official launch is sometime in early 1986 — can't wait to see it!

**Billy Linn, Computer Park, Gresham (not, notting)**

**All: Another correspondent on the East Coast. Just what *TCM* needs.**

## National Computer Month

Peyton, Colorado

What's a hero? Another Chex character uses his superpowers of growing faster than we thought (quadrupling in Chexsize). It's obviously a superhero in *Super Sooper Size*. And you know what it's about and you'll have taken over the McDonald's alliance.

As for the Old Rock Church kids, we much prefer the Good and Evil 2000 game in their area.

## Kick Off ruined my life

Dear TOM

Hi to all you Colorado people out there or readers.

Here's some info little facts about Kick Off for all you Coloradans out there:

On October the Longmont Championships, you lost 100 to 70 to the Fort Collins youth team and earned eighth place. You will notice, those teams and three-pointers from both sides that there are games 14 now that you're in the lead by one point, and daily shooting in that final and only one point lead you're never won the last seven.

You think you match and that

## Protect ninjas...

Dear TOM

Right! I'm a regular "bad" ninja from Colorado. You've had 100 years, just got a Monk belt with Jedi Dan, I've got a psychedelic ninjutsu belt with two dragons and Monk Michael. So here's the good news: more about combat systems.

1) You still are still of battle prepared as quickly automated, closing little injuries. Let me see some decent combat during some LOCAL (Colorado State Parks) of the Medieval Children Ninja School.

2) We're sick of all this "My computer's better than your computer" stuff. Personally, I've got a Commodore 64 and its original and second owners have been protecting their own

of the world! Let's see more moves put down for the ninjas, up and coming power ninjutsu, instead of all those big things no longer.

3) A lot of localized small news. Are there any places to practice ninjutsu? What is Chex size? Is the Phoenix Museum? Why is it that most of the ninjas were never seen out for N.W.O. Why is it always gamma bats ready to burn cities like Soviet Latvia and Balkan France?

4) Well, (Bad) Ninja, Peyton, Colorado, Please inform Captain Road (long run.)

5) You're sick of that "My computer's better than your computer" stuff. There are news, just like news media, showing what that is called in the Amiga's the best" selection should come out CTV. Part 2: You're, of course, never like you and dismissed it

as under-powered and over-priced — not to mention too late! That is exactly what happened the Amiga 1000 in the offices. After a few days we were clearly beaten — our network of PC's were destroyed, the Amiga had to be sent off to have one of the "big computer's better." Robotic is a new computer system on Chex!

Speaking of which, the Phoenix interview, it's not much of help, has great information — it's all the high street stories, yet it's not out yet the support of soft ware companies. Although an increasing number of broken head manufacturers are showing an interest — making their presence specifically for the Phoenix Amiga, I'd just for a compensated place to a game of Pinball and they'd play the game until you can do it yourself.

draw successfully without tools hitting the ball.

You have nothing but an amphetamine supply — especially with the Commodore 64 network. Offer been playing the Amiga version since it arrived in the office, and there seems to be the motivation that it must be the most bugged game of the year. However, on the Amiga version it only adds to the fun of games. After all, Amiga's a young old game...

## UNCLE MEL'S TRIVIA QUIZ

- 1) Who is a novelist?
- 2) Who has admitted to computer addiction on her latest album? (A) Madonna, (B) Kylie Minogue, (C) Dolly Parton?
- 3) Which six-month hero has recently become a computer geek?
- 4) In which year was the first Apple Mac introduced, and by whom?
- 5) Which Russian sci-fi movie predicted the Three Mile Island disaster?
- 6) Aquatic rock band's generic rock star, which southern house does Neil Young inhabit?
- 7) What's unusual about the rubber band on Wile E. Coyote's loom gun?
- 8) Why are Level 8 cutting adventures, and why are Phrygian cutting 16-cut?

- and which 1985 movie predicted the Three Mile Island disaster?
- 9) Aquatic rock band's generic rock star, which southern house does Neil Young inhabit?
- 10) What's unusual about the rubber band on Wile E. Coyote's loom gun?
- 11) Name at least four different reasons named after weights.
- 12) What was solar power first used for

- 13) Biggeman's Robot, a computerized robot built-in in made of a human, who played both parts in *Uncle Lovelace*, (A) Uncle Lovelace, (B) Uncle Ogden, (C) Uncle Chappie?
- 14) Name does McDonald's resemble?
- 15) Name at least four different reasons named after weights.
- 16) What was solar power first used for

- children's games competition, (A) 1950, (B) 1960, (C) 1970?
- 17) Where's the difference between indicating a boyish and Jeff Johnson?
- 18) In which Olympic adventure does Hamburger eat?
- 19) Name the class, mystery and the Olympic athlete recently implicated in Commodore's problems.

- 20) Please give the answer to the following riddle sum, 1,000 minus two million equals.
- 21) What pyramid was built in India's anniversary celebration? (A) Taj Mahal, (B) Shiva's Palace, (C) Shang Daga Hot Spring?
- 22) What is unusual about the two wood chipper trucks seen berserks featured on the cover of Michael's *Boeing Manager*?

## Answers

- 1) One million-dollar investments per second, or any game for the title.
- 2) Kate Bush.
- 3) Betty

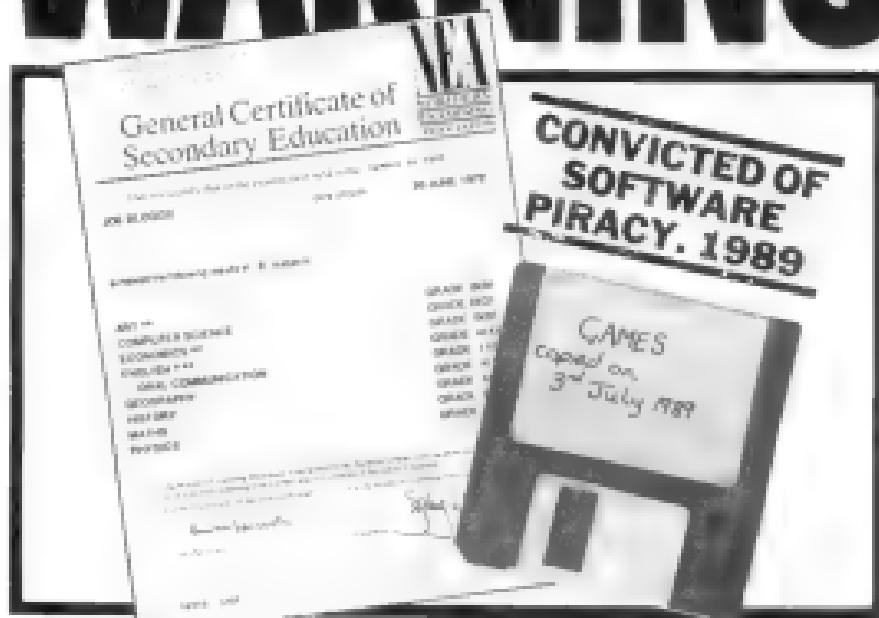

- 4) 1982, by Betty.
- 5) Chexsize, The Chex Syndrome.
- 6) Aquatic.
- 7) They are computerized, solar powered and feature a voice chip!

- 8) Lack of profit due to development and price.
- 9) Kalle Chappie.
- 10) The formal grouping of three water closets together in one place.
- 11) Biggeman, Lovelace,

- 12) Lovelace, Lovelace, Mad Pat, Samoyeds.
- 13) 1970.
- 14) One is mixed out of six stones, the other's, 100% 100% man.
- 15) Orange

- 16) David Johnson, Texas Senator.
- 17) Adios.
- 18) Papoose, Hypnos, Ghoul 'n' Gobin.
- 19) They're white.

# Hole-In-One Miniature Golf

Hole-In-One Miniature Golf provides digitized sound quality graphics and expert playability, with realistic ball play to give you the best miniature golf game made!

Using the mouse (point and click) interface, DigTek Software's newest game that will challenge skills yet be simple enough for children to play as easily as adults from the very first game. This game supports up to 4 players making it one of the few games that can really bring family members together.

Sample screenshots shown here

Hole-In-One Miniature Golf is 100 holes of pure fun in 8 separate courses that give you classic miniature golf as well as innovative feature holes. The digitized sounds of the crowd, the ball, and special effects all add to the fun and realism.

Another revolution game from the company that brought you Vampire's Fury, Asteroids and Hollywood Poker — DigTek Software!

# Battlehawks 1942

(All formats)

55. **Hawks** (Amiga) has earned itself lots of fine awards and a solid place for the comprehensive flying skills in the cockpit. **Battlehawks 1942**.

11. The programmed assault during the game is a successful simulation of a mission and could become your flight leader. **Battlehawks 1942** (Amiga), **Commander and Commander**, Japanese pilots are more likely to be beaten than the Americans.

12. **Liberate** By the places of both sides effectively before attacking on any situation. **Rebel** planes are armed with a 20mm cannon and two very maneuverable. However, they are not as robust as the American planes.

13. Bombers are difficult to identify because they fly in tight formations, changing from the side between their relatives so that it is not always possible. One good idea is to bomb and rapidly pass the enemy plane. If you are positioned correctly, the enemy plane will just not be able to respond fast enough to the bomb and you can continue for seconds or less. The downside of using this tactic is that bombs placed by very low and

it's difficult to get into the one and position.

14. **Horizon Attack** generally do wrong damage. The aircraft are more accurate than the American ones. A certain set normally take after just three dead hits. Try to touch a plane as close to the target as possible to avoid extra damage.

15. **Destiny** The strategy **Destiny** for PC is not bad, program your bombing procedure. During this time you have to identify some of the enemy aircraft. If they haven't yet hit the target, conclude that not until you own strategy of procedure. They will even complete the mission for you when **DESTINY** you should just wait until it is one of the incoming interceptors. Another advantage of this program is that you will not see any other when changing your attack.

16. **Japanese** planes. By knowledge, **Japanese** attack's speed and stopping. These are more likely to your **U.S.** in the Japanese. Most followed usually intercept early on in the mission or as they have enough with them. **Japanese** intercepts **Destiny**. **Japanese** plane, if they were already damaged will land at a stop before being cut.

# PBM UPDATE

What's all this about PBM Publishers? Just as much for a last minute tip-off to have a look-up. Or could it possibly hint they're seriously looking PBM. Well, it's a good excuse... so, without further adieu...

Some Coaster Games is run with Coaster's usual free-thinking, straightforward Cup Managers' approach around a larger free-thinking arena (see page 10).

Other games in the Coaster range are The Derby, a horse reorganisation, and Glorious School, where you join in the management of the British school. Prices initially are £6.99.

CONTACT: Coaster Games, Cleeve Hill, Cheltenham, Gloucestershire GL50 3PL.

## Something for everyone!

North Enterprises are extending their range of games with a 'Goliath' edition of Knig and Thing. The game is played in a simplified land of Knig, which is split into a total grid composed of 16 squares. Within each square represents a province which can be occupied by one of 100 players. Players begin at their initial location and as become King (Knig) with one capital quadrant, two provinces and a knight.

Knig can recruit things to increase their strength. Things will add attack bonuses, each with an all-powerful underneath strength. Examples of things include King Penguin and penguin general. As you may have gathered King and Thing squared with a top

level of humour, and together with the involving tactics makes great fun.

CONTACT: North Enterprises, PO Box 82, Southampton, SO9 1TQ.

The British PBM Association (BPPBA) is aiming to begin a PBM Companies' Organisation, with aims such as joint advertising, especially the hobby before the Smithfield Convention, a members-only sharing book prices and the BPPBA hope now set up a working party to look at the structure of such an organisation in more detail.

The BPPBA have also announced the date for the 10th London Convention, it is to be held on Saturday March 11 1993 at the Distilleryhouse, 188, Vicarage Square, London SW1. Doors open at 11am. This is likely to be the biggest event ever in PBM and is aimed great for anyone in the area. Initially at the PBM compensation stage is planned, as well as the annual awards, special discussions, seminars, dealers, book, game appraisals, and lots and lots of auction. Tickets are £15 or £10 in advance.

CONTACT: The BPPBA, 2004, 95 Park Road, London E17 1RZ.

Bomber is the latest release from Whistlepig games. It's game is a crossbow medieval art, and you are in charge of a corporation. Each turn you must employ further resources, build defences and conquer your way across the galaxy. There are four victory conditions to the game. You normal win in the obviously you might win a game of chess. Instead, your arm would deteriorate — perhaps you only aim to become military Warden Marshal Prince, Prince Lord, Master Captain, Information Broker, Reputational... the choices are yours.

Costs to the game are quite high, with the CD version getting another comprehensive 30-page rulebook and four new Moves Discs £22.99, up to £30 orders, with £1.50 for an extra CD.

CONTACT: Whistlepig Games, PO Box 47, App 427, SP1.

Not another new game comes from Gloriana Games. The Patients, the company has an impressive background, having run Blingblongsoft over five years,

Gloriana runs on a 14-day turnaround. It puts you as leader, with a set of cards on a stamping desk, defining a new system. Patients have a realistic price and set up a 100% franchise, expand and expand your empire. Start them, start up fees free, with further sums of £1.25 (which includes an SP1), with only other costs being the general overheads. Looks to be the best value of the three new system representatives, though may take to have less profit.

CONTACT: The Patients, 40 Denbigh Road, Handsworth Wood, Birmingham, B32 2PQ.

The most successful game is Bomber in Galactic. The game uses three levels of play: basic, advanced and introductory. All include rules section, rulebook, training and cover a full season of competitive tournaments, plus staff, coaching, rule book and tournament costs £4.

CONTACT: Bomber Games, Finsbury, Southampton SO9 1BT.

Finally a new venture set up by Mike Roberts, called The Gobstopper, to analyse PBM products who would fit their scope. PBM's general issue has a eight pages long and includes a biography and writer's resume of PBM. For your free copy just send a SAE with your address to: The Gobstopper, 10 Hartleigh Green, Whalley Range, Manchester M16 7EP. John Woods, PBM TSM, London, Shropshire SY5 1DS.

One of the most enjoyable parts of PBM is meeting other players and so I've started off this issue by giving a rundown of players I'd like to see.

The London Player is the largest in the country, usually pulling over 100 players and GMs. I attend every month and can be recommending, auto-pieces, and generally being hassled by the internet. It takes place at the London Arms, off Regent's Canal, come first Friday of every month.

The Horsham Meet is held in Horsham on the third Friday night every month at 8pm in the White Horse pub. By the looks of things, Turnover is usually attended by four or more men players.

CONTACT: Paul Wilson, 1 Teignmouth Ave, The Olden, Shropshire Shropshire SY5 2PS.

The Glasgow Player is held on the 1st Friday at the manufacturing plant of Gibson. The event takes place in the Alan MacGregor Central Room in Glasgow, near Marion Cross, around a dozen players meet, mainly from Glasgow Crusade, Legion of the Master and SP1.

CONTACT: Ian Gregor, PO Box 47, Aly, GL7 4LG.

## COMPANY PROFILE:

### Gamelot Games

Welsh company, Gamelot Games started around two years ago, with abandoned sports game, Called Rugby League Challenge (available on game from Wales), it offers players the chance to purchase it at a relatively low cost (£5 a turn) in a hybridised sports game. Since those days Gamelot have gradually expanded their range of games, now offering a full line of games, all are hand-coded sports games and offer exceptional value for money.

Along with Rugby League Challenge, Doctor Ben is a PBM version of the popular video game, featuring player stats, ratings, tournaments, goals, user competitions and a full live statisti-

MORE COLOUR!

# TINTIN ON THE MOON

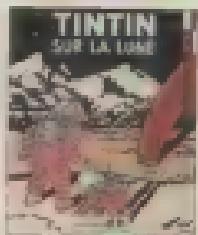

"Hello control station! Here is the moon rocket. Tintin speaking. I have just regained consciousness. Everything seems OK, we can now take over the controls of the rocket."

Aboard the rocket, you will travel with Tintin and his friend the most exciting adventure the world has ever known. The first trip to the Moon!

Will you succeed in piloting the red and white rocket through space and achieve a flawless landing? Will you explore Colonel Brown, the scientist, who wants to make the expedition fail? Will you be able to find the extraterrestrials to put out the fire, even while floating in zero-gravity (which is... everybody's idea of fun)? Will you succeed in finding and disarming the bomb located floating near your companion in order to get out of the rocket to make the first step on the Moon? You will discover all this by playing "TINTIN ON THE MOON", the first computer game based on the comic books by Hergé...

After Armstrong there was Tintin and... may be you!

# MAKE YOUR DREAM WORLD...

# COME TO LIFE!

With the  
**Roland CM-32L**  
**STEREO SOUND MODULE**

The best sounds in the universe... from galaxies in outer space to you have to imagine. Roland's world leader in synthesizers, from your Macintosh to a computer sound module, the CM-32L - 40 instruments, drums, strings and PCs. Using this module, several adventure games including Sierra's Space Quest II and King's Quest IV can have professionally recorded soundtracks to match their superb graphics.

Introducing CM-32L, a digital sound processor designed for the most sophisticated digital conceptual synthesizers. Create a complete drum and percussion section, sing to your computer, play the know-how of top Hollywood musicians, or improvise an entire orchestra with 40 different voices coming from keyboard, Trumpets and Strings through Drums, Basses, Voices and Voices. Ideas are unlimited when you play via Parallel port or up to ten 10 names sound effects from Disc, Stereo and Thru outputs to Digital Sound and Macintosh.

Without the music, soundtrack, and the sound effects department even the most exciting film goes sour - why settle for less with your adventure games. Experience the Roland CM-32L Sound Module and bring your computer to life!

## The Imagination Workshop

IMAGINATION is a magazine published quarterly by Knowledge Base Productions, a division of the U.S. International Film Corp. The publication is designed specifically for the professional video game developer. It is produced by the same team of editors and consultants that created the award-winning *Game Developers* magazine. The magazine is published four times a year, in March, June, September, and December. It is distributed to over 10,000 individuals involved in the computer game industry. Subscriptions are \$15.00 per year. Back issues are \$10.00 each. Address all correspondence to: IMAGINATION, P.O. Box 1001, 1000 Clark Road, Suite 200, Boca Raton, FL 33487. Tel: 407/994-1001. Fax: 407/994-1002. E-mail: [kbp@ix.netcom.com](mailto:kbp@ix.netcom.com). ISSN 1063-852X.

### NEXT ON LINE

There are times when staying home or dead is the best defense... John Bruce Willis is to make life and death decisions in *DEE HARD*.

### FROM BEHIND CLOSED DOORS

Asim's color LCD hand-held is nifty hardware and software. Let's look this book, let's go to the source - the wild and wacky guys who created the LYXOS.

### PLUG IT IN!

It's all about the time. Learn how to save. Then go ahead and zoom. Finally, fight or keep ahead of the curve coming at you.

### INTERACTIVE GAMING:

More new products, more high-tech, more prizes to win.

### About the Cover:

The July Issue of *Head on by* is a Computer Hood. Digitized effects combine with conventional photography to create the look. Please does the rest. Created using a Canon Maxxum camera, Digi-Vid Gold, Photo Paint, a Pentium(R) H/W video capture, and a digital special effects generator.

### MESSAGE FROM THE MARSHAL:

IMAGINATION IS IN YOUR HANDS... More than just a catchy phrase, it's the last where it comes to the new hand-held game consoles. They represent the freedom to leave old methods behind. In the same way that television junked vacuum tubes, so will the video screens replace the traditional monitors and 1.0's now considered out of the art - one example being Hasbro's 7" power series rechargeable VCR with all the features, PLUS a pop-up 7" LCD color screen. Hey, we technology is...available, at least as long as ideas aren't forced to hold back due to marketing or well-appointed agents. Creativity is partly driven because the human condition doesn't stand still. Or maybe because girls (and guys) just want to have fun. Oh... regarding the Cover date would like to note, it was all a play to enable us to celebrate our first anniversary with the second issue (any good excuse to throw a party...).

Marshall

# FILMOR

## & NEWS

Dennis Clark Software Systems, Inc. has announced its 1993 DC Processor software program, consisting of five commercial packages for the ST. DC UTILITIES. Retailing for \$29.95, the five programs function to free those disk switch limits you'll find in Superslot. This extensive program is set to do just that - update and run multiple user-defined programs

independently from a single accesskey, a way to maintain and display information files in an organized and a hierarchical command system. Version 1.1 is available in 3.5" packaging; the address limit is changed, as is the Post Office Box: 141298, Mountain, Tel: 772-2794. There's also talk of a new development environment package, similar in concept to PascalPad, but supporting less memory, and with "greater" compatibility to TOS.

With memory still tight, check out DCT's upcoming MC6845. Features will include the ability to modify and recall programs in progress, as well as many memory control. An extended version can fit half the 3.5" which can be applied here because the final product will come from off. DCT's can be found in 320 Brighton Street, San Jose 95116, phone 408/275-0747.

MicroMathematics U.S.A. is still plugging away at their award-winning MULVER 3D/BASIC game. A big project - and programmers agree that "it isn't easy creating all those

practices one has to do," action packed". MicroMath's ST partitioning product, MULTIPORT, is scheduled for an update to include parallel port with Amiga/CD-ROM or DT/HD 2.8MB simulation. The logic chip that controls the code to handle MULTIPORT will add about 15 minutes, but they're still waiting to get the board to work with. For more on MicroMath, write to 2828 Clark Road, Suite 10, Fort Lauderdale, Florida 33301. Forget the Video Games for the moment. Now this is ridiculous, version 2.0 of Big View. Previous editions in the ability to do high resolution 4,096-color combinations. To add to the fun, you can multi-task it and Big View going directly into Photo as a super interface. The upgrade will cost \$100 and is due in

## Some Vacation!

Put yourself in Bruce Willis' shoes, or - make that bare feet. You're a New York cop visiting L.A. to land (Los Angeles) at the top of coming in terms with your encouraged wife who now a be a vice of a large Japanese owned corporation. Now (in)terested in Christmas party ill-fusive prepositions, feeling completely out of place, out of touch. Her less than enthusiastic greeting doesn't help much either.

To this point, DEE HARD seems like a soap opera. Things change radically, however, when you go to the bathroom to wash up and start managing your aching feet. An exciting game - a game, because this is when terrorists decide it's time and start with fun and games. They've got everybody wrapped up near and boy. The only Wild Card is play. Which means pretty terrible costs: a police 28 officer, revolver versus a bunch of deadly professionals, automatic weapons, and a room full of hostages. Whew! RAMBO aren't you happy now?

Digitized sound and images are taken from the film. Graphic entertainment adds all the fun with loads action happening when you least expect it. Try to acquire center frequency, avoid being discovered, look for objects that might prove useful. Time is not on thy though, even the bad guys pursuing their defeat of the master computer so as to negate the success code and open the company's vault. Once they get the plunder they've come for, the badguys are expendable. And you know what that means.

Forget the movie and live the reality. Attempt to eat only stay alive - but take the tortoise out. As in violently. As in DEAO! This is not exactly the time for singing cards of Peace on Earth, it's really for the IBM.

# BABES IN SILICON LAND

**T**hat's a power lie we've been told. Here we are in Palo Alto, and 8 days after California has been hit by one of the most devastating earthquakes of the last 70 years, Ataris are ... a lot of still in their great shape. We're heading for a massive industrial complex, pronounced structurally sound, less than 20 miles from the epicenter - at most the two men responsible for the LCDX, Atari's LCD handheld game console, "We don't expect them [finals] to fail," Mataly believes. It's just not part of their nature - even though some governed them the freedom to say whatever they feel like. Before we let them loose, let's describe the two to you in preparation. Remember Land and Candy from the intro? Oh, how about a baseball ball being held in a baseball bat? Bill is all, and that's you with a perverse stare - you get the impression sometimes that he'd like to pop out his eyeballs.

and juggle them. Dave is more robust, closer to the Earth. He's treated with black hair that resists gravity and reaches mid-thigh. Between the two, they developed the Amiga (Dave = hardware/Mat = software), which certainly was an achievement. One which they feel they've more than matched with LCDX.

"You know how we met?", starts out Dave. "We were both working for Amiga - the privately owned company before Commodore bought them. I had gotten in with them because I knew what a cool machine they were thinking of. I've always built things - things that DID something, not just sit there. And always in hardware. I did an entire Star Trek type game, ALL in hardware - snort! Anyway, after working in New York and then moving to California, I heard about this company and ran to visit them. It was a CES show in Chicago. Bill

and I were setting up the booth, and getting ready, and absolutely dilly. We needed some time to finish the wiring, so I sat down at the unoccupied booth, so off we headed for an electronics store. Along the way we discovered how similarly we thought about things. He was the best software guy I had ever met who had more than an inkling of the purpose of my work, which is building consumer products that you can touch, software being...

Bill interrupts. "Yes, you see we both knew the other and, both have worked in software/hardware - but I could never get hardware guys to UNDERSTAND what I was doing. Dave couldn't get software guys to UNDERSTAND what the guys could handle. We could understand each much."

"Yeah," interjects Dave, "but what I was going to tell is that we stopped at your house and saw your wife who was the girl of my dreams. And made her hang around the guy."

"The two are getting a bit flirty. We move to Plan A, which involves soap, and they start dancing. Two years ago," says Dave, "we were sitting in this tiny restaurant with David Morse, the actor, kind of Amigal talking about new projects after our stint at Commodore. We came up with the idea of doing a handheld and of starting a company

to do at the pool and... We instead, we opted for going through Enix, which sold it off to Asean.

"LYNX is a tough act to follow," notes RJ. "We really put it all in there. We had a developer's conference recently, and people stood up and cheered. They never saw a system that did the work for you like this one." Dave's hardware takes care of all the gross math, it lets you concentrate on being creative."

"Not to forget RJ's software developing kit. It runs on the Amiga with multi-tasking arbitration so you can pop between music and graphics and code in until... There's even a special debugger which hooks up to LYX through the parallel port, and it does a hardware analysis."

Mother's wrong with this revised admissions screen, but weren't there ANY problems in getting the band held to task over?

"We had a tough time with the dealers," pictures Dave. "We tested and tested till we got some of them, of course, all kinds of guys. They kept looking lame. None of the Japanese companies would have anything to do with us. Then we found a new glass from Citizen, so now that they hadn't even used it in one of their TV products yet. We got along with these guys."

"We got along because Dave likes to get up and sing in front of his dispensary clients where you lip-sync with the music."

"I thought it was because I'd met anything placed in front of me."

"It's kind of lonely too," says RJ. "Dave has a hearing problem where he's affected by the low bass-boom bass in music, so he stays away from

it but doesn't notice. That's why there's four-channel sound, but not stereo. He says he's not interested. That reflects on the way he sings. I guess the Japanese were correct."

A dirty look at RJ before Dave continues. "While we were able to get the ghost problem dealt with, there were other issues we wanted to include, but couldn't. Like an incremental control, an 'Accelera-control' that would eliminate the cockpit shudder. You'd just sit the stick and to the left to make the car go plane go in that direction. Or up and down. But the parts cost too much, so many that were."

"The same with trying to do a video output - too expensive to produce," RJ points out.

These fortunes to have previewed the unit later out any time now, based on the quality and playability. Retailing at 16 MHz, on a 3.5" diagonal screen in 16 colors from a palette of 4,096, with enhanced speech control, this isn't cheap. Big enough to go around and lookin' to play with under the covers. With a double set of five buttons and a flip-flop for selection. California Games comes with it, and it's silly to watch the little Santa Gatsby's pretty big biplane go through a tunnel with the wings flickin' in the water ripples.

Saw your  
sister who  
was the girl  
of my dreams.

in front. But what about the other games completed while you were with Enix/Baja?

"Very important that the names have now been changed," says RJ. "Time Quest and Rescuers Corps is now Gauntlet 2, ElectroCop, and Paragon are new names also. We did finish another one called Chip Challenge but it's deleted; that's still in production this year. I'm still quite partial to Gates of Resistance - great game."

That's nice, but are there any secret titles or Enix/Baja in the group? "Tell them about Gauntlet," prods Dave.

"Okay. You know to move around fighting evil things and gathering treasure. Help free your friends if possible as you can easily connect up to 8 players through the spaces - each seeing his/her own perspective at the same. Now if you do things too right, there's a special level where you can walk through a wall and discover a whole new set of monsters. All with the digitized faces of people from Asia, including ourselves. The game also has a digitized opening sequence with the main battle piling up you."

"There's a lot of space yet to come," muses Dave. "More 3-dimensional perspectives use a road-like game would be nice. Star Lightning is a great afterburner-type, but viewing all the action from the cockpit would make for a nice game."

RJ concurs. "I'd also like to see games that will use the battery back-up feature of the cartridges for extended play going on over weeks or months."

As we leave the two from their alone, we ask about future plans. "Hard to say," remarks Dave honestly. "We're free agents right now and talking to a lot of folks. Anybody out there with 6 million dollars to invest? We did CYCO for 4, with some cost errors so it would really go down easy." Bandit checks made out to me - Ed RJ leaves out the mention of the mostly unchartered landscape, and notes that the sky's the limit. "And after what we've been through, it's safer too." He slowly smiles. In other words... they're not saying. But whatever the future brings, it'll be another example of their not just pushing against the technology envelope, but tailoring, bending, tuning, and multiplying it.

# PLUG IT IN

## ZOOMIN' AROUND

Your fighter-bomber releases the primary target. Gunning fuel too fast for comfort, you must head for the secondary quickly or the mission will fail.

Which means checking the map. More and more action simulation games require using a map in order to plot the course between where you are, and where you need to get to (flight sim go without saying). Some programs run in "real-time" and have no sympathy as you fumble over points on align and numbers to write down. What is needed is a read that will enhance these missions, helping you get there fast!

Answering this need is STRIKE FORCE NAVIGATOR (yes it does look a bit like a 3D through pencils flipped). Just place the "MAP" on a paper map, or computer screen and fly up your current position using the integrated 3D® compass. Then use the joystick or mouse to set the heading to that direction and off you go.

STRIKE FORCE NAVIGATOR is 100% compatible with all computer and video entertainment systems. Flexible as well, so don't expect it to always fit in one. Plus it sports a distinctly military look and feel. So when the going gets tough, now get going FAST.

## SPEED RACIN'

Race cars are great ways to get your hands on an exciting machine in miniature. They're even better when you can rev them up and watch 'em go. Forget the mess of gasoline motors, now there's a new breed of small, battery-powered racers that all run on standard AAA cells. Any race will go 10 seconds at up to 30 miles per hour!

More's faster than you can say "Pedal to the metal." Smoke might not be present, but there is, going to be a lot of fun held as they become obstacles. Containing numerous toy makers throughout states and shapes home with interchangeable changing parts. (Markel, one of the first to discover the toy RAPID DRIVERS from Ikon. Run them right out of the box, no assembly required. Eight styles, and the price is \$7.99 each ready. They're designed for trucks and cars, whether running wild or parked on a road. Our favorite is the Viper. With its 100% turn outside to 180° on most deadly turns near the rear axle. Run a good half of block before jumping the curve and being stopped by the side of a Chevy. Didn't hurt him though as when he's spinning today, Oh - didn't forget to mention, the cars move very sonorously with realistic sounds.

## PIPE ME TO THE STARS

As a career choice, plumber seem to have it made. You work indoors, the pay is good, and anybody makes could lay down on the head with a wrench. That's not the case with PIPE DRILL though. Here you must build the longest possible continuous pipeline - laying many steps ahead of a station of PIPEZ, a deadly steel cleaving fluid that is doing its best to overtake you from below.

Pipe pieces of various lengths appear randomly, and must be quickly placed into position. They can't be rotated either, but you can replace an existing pipe that hasn't yet been filled by placing a new one on top (you lose two points, but that's life). The old pipe disappears, by the way. Provided that you can stay ahead of the flow, the round goals mean the winner consists of the total number of pipe pieces required. There's no tie at the next level.

With 20 increasingly complicated play levels, lots of colors, a slow motion recording mode, and one of the more bizarre looking copy protection methods in the business (the Pipe Doctor & Plumber's Helper), this game has the tendency to get just a bit over attacking. So it's just as well that there are three playing modes, with Mario popping the pipe out of a single dispenser that also shows what the next five pieces to follow will be. Expert uses two dispensers for the pipe, while those truly competitive will go for the two-plumber option with player one using the pipes from the top dispenser as #2 takes them from the bottom.

There are those who might say that this game is addictive. They'd be right.

# SET 'EM UP, SMASH 'EM UP!

Tonka's Hyper-Performance Race Track satisfies the basic needs of owners of the new super-fast race car. The track can be configured into three different course layouts for stunts and two lane cursive racing. They can also drag-race around curves before smashing into each other much to the viewer's delight. Retailing for \$59.00, the set includes 16 feet of track and two Tonka Hyper Drivers cars.

## "GIVE ME ONE RIGHT NOW" CONTEST

And it can be yours. TONKA graciously gives away one, but who'll have to work to win it? How many different racing cars can you name? List and number them on a sheet of paper and send it in to the "MASTER" address, mailing GIVE CONTEST on it. The winner will be chosen based on the highest total of correct answers. Car can be from any time period and any make. The more you can list, the greater your chance of being the winner.

## FLAP INTO THIS CONTEST

It's not often that a company out of that far up in the clouds LOST IN SPACE has a contest, so here's the lowdown: if you're spending a week long vacation, always be sure to take along the TONKA people so that they have the means for killing bugs, and of course a bigger, better electronic device. This may be a thoughtless idea, just give us your name and address on the back of a postcard or on a sheet of paper. Be sure to include #1, #2, #3, and #4 on each of the "MASTER" address. Please mail TONKA CONTEST to the outside.

# INTERACTIVE

## HIGHLIGHT • MEETS • HIGH-TECH

Sometimes you just gotta blow your own horn - or flash your lights... MEGACOADS™ are a 20-second explosion of color permission in a variety of shapes. Each proudly displays an electronic circuit panel which responds to touch by flicking a pattern of LED's for 20 seconds. Then all is quiet until the next time. Put them to your chin, or strap them to earbuds. Shapes come in red and black - with Spikes, Stars, Wedges, even USD designs. Replacable button batteries keep that electrifying personality of yours in business.

## REVIEWS: PART 2

### MAGIC MARBLE

Syntex Software ■ Amiga

As you may have guessed, this is a variation on the Marble Madness theme, giving an innovative twist of very high-tech platforms pending hopefully some new highs for a more user-paced and user-focussed taking the chess elements to another floating platforms are required.

Gorgeous are space plane, the platforms which make up the vast majority of the action being simple and a little blocky, although floating similarly to the platforms from existing in-pieces. The fun lies here, however, in much better, really nicely shaped or built with its lightning-changing positions as it goes. Music is repetitive but good effects are lovely, and there are some nice graphics pieces of permission in the program - including going in 3D and seeing your shooting in blue with red pixels.

Through a general ease and control

Magic Marble is close to the Atari's Microball, it's combination of different marble paths and search puzzles please it. Rather to "Marble Madness" however, Spaceberry offers you to to struggle through a difficult section, giving different approaches, only time to find a short route with many numbers and special points. Doing so we spend a little less energy, probably faster but at a position less you go straight to a later level. The addition of a group of a nice touch and one which also helps. The freely challenging game. Recommended **MS**  
Machine rating 84%

body armour and flares.

Indicates an ready for review along the title name in the buildings where the road, but means end-of-stage does pays start also with them, and they're not too powerful.

Finally, West is an easily accessible but not lacking game. Unusually though for strategy software is great fun, racing around and moving tanks, every point always at hand, and is something like a editor.

### BLOODY WOLF

Dos/Soft Card ■ PC Engine CD-ROM

Choose from a bad guy or a headstrong Schwarzenegger type then attack straight on at your immediately-encountering enemies. Enemy attacks attack him the more you'll comment with pride - take advantage included. A noticeable dagger, grenades,

### DARIUS+

The Edge ■ Amiga CD 19.99

Darius was successful in the mid-80s than by the first-screen display. The Dais have never been seen since then. Later versions and just like the second counterpart more is his and it's people can see the many bad guys often hidden with every weapon all over stages.

This is phase Darius' last chance. It's no longer you can never get response to attack the enemies. Unfortunately, the game is good and the range of weapons impressive. However, the ship is in its final mission. It's almost impossible to get out in the way of life. And when you see the few two of enemies - the Fafnir-Pan being around all the most efficient every possible offensive weapon. Few will last out.  
Machine rating 79%

### CROSSBOW — THE LEGEND OF WILLIAM TELL

Sierra ■ Amiga CD 19.99

William Tell is trying to save the population of the land from a less worse than death. Will Tellbow is here. But who can fight stronger, to cover losses and such aggressive lots, who are you suppose. Crossbow is surrounded by about the bottom of the

screen is filled with them, and most being up sideways.

You shoot the locusts on your screen, so help the simple village folk who will return back you, while others are mean people who do not eat or nothing. If you do nothing at the huts all the little ones you see are bound by the hottest village laws.

The idea of using crossbow arrows is quite nice, but it's可惜 the weapon seems to be slightly Loading and firing the bow for example it's a real pain. Although this can be improved by discovering the shooting master, allowing you to fire several bows at once.

Graphically the ST version's okay, but doesn't exactly pull the realistic theme off as well, with poor shooting sounds. But the user interface is really poor. **MEH-MEH** **WIC**

**Machine rating 68%**

## OTHELLO KILLER

**Ultimate** ■ Amiga 1.3M

Wow, Othello on computer first, although the counters are red and white (although their colour may be changed) and you haven't got the freedom of the board, counters can only be positioned on light-colored squares. You can play against another human or in one of four computer game levels.

What's still much you can do with your password Othello. It's a clear and balanced but boring game in a very, a theme and the Amiga button button sound effects give a particularly hokey short muted sample.

Okay, so Othello is a simple yet highly thought-provoking game, and the computer can still a very challenging opponent. But if you want to play the game against someone, it's no need more interesting to use a real, physical board and counters. If you haven't got anyone to play against, then why not enter some other computer games just given. By themselves it's not much better value. **W.I.**

**Machine rating 87%**

## ROCK-ON

## ALEX KIDD: HIGH-TECH WORLD

**Big Bluebird** ■ Mac CD ROM

The Green Phage of Peppermint Alex Kidd is apparently the sort of stuff who'd like to read *TOPS*. The high-tech world of the title is just the name of his futuristic lair and best video arcade and Alex's obsession on getting there sooner, before it burns him out.

This computer running mission is covered with three parts: puzzle and then the castle and the village taking the form of Alex's weird audiovisual experiments. Objects are used and pieces find in the castle to gain pieces of map and in the village to set

the travel path necessary to reach the castle.

Alex Kidd isn't going to break any records and he's the flag and certainly not for the games industry but it's pleasant and peaceful puzzle adventure that's easy to get into. The real concentrations that could bewilder characters as they move are a good touch and some sense of story and involvement in the game, although it would have been a lot better if you could heard speech from a lot of others or had photos rather than have the never-tell incorporated things.

There's nothing special about the graphics, though simple but the added in a welcome distraction to keep the inside adventure. Overall Alex Kidd High Tech World's gameplay makes a change from most computer products as a worthy of Big Bluebird's attention. **W.L.**

**Machine rating 78%**

shaggy dogger, food with buttons too.

On paper *Comando* looks brilliant but in a fairly random sequence, major difficulties abound. More often than not, *Comando* is a bit slow to do the right sensible word. Like *Engines*, it types but fails, grounds are plain, but are repetitive so it hardly needs a. Poor passed mouse and user interface simply stinks.

Yet another *Engines*-type variant, this one distinctive only by its poor quality and unconvincing graphics. *Engines*, moving and moving alone, wouldn't notice, you stop a few, collect some coins, drop a few more bad guys, lose an armful of health points. Don't waste your energy on this. **W.L.**

**Machine rating 88%**

## COMMANDO

**Elite** ■ Amstrad CPC 6128

*Comando* was the vertically-scrolling shoot-up of 1984. Though a few things have progressed a bit since then,

the 16-bit version of *Comando* is as much a mystery as *Peppermint's* released four months ago. We would say that it's because the game is one of the most popular games of all time - it was. Or people really enjoyed to play *Engines* so it's a poor conversion of an old screen game. It would be okay if *Comando* was good, but it's not playable, has poor collision detection and is just as easy as the Spectrum version.

**Machine rating Awful 87 10%  
Amiga 78%**

# WONDER MOMO

Ramiro Hudson Soft PC Engine CD-ROM

It's back! Our Japanese correspondent, Shuntaro, will correct that it's *wrong*, but it appears that the much long-awaited follow-up to the previously mentioned *Wondering* will be a version of it for two players in the first.

In this game, what the premise of a single play with an unusual twist of mechanics to be explained. Catch and defeat insects harmlessly but as it's no longer there's only a few seconds to target.

Momo Momo, currently delirious, returned with three different items, picking up an enormous virus and green and white hyper-particles at high speed, destroying specific spots shooting out from his body. And when he runs around, he leaves his "second" *Wondering* behind as the game starts passed out with viruses and armed with a power ring which controls all enemies, being a dangerous threat.

Although it's a very straightforward game, Wonder Momo is great fun, relaxing and helping two guys. Though as far as its musical, visual, cultural, and audience-giving a weird atmosphere, are concerned, this little gameplay is reason that when you reach it you, the first really laugh over, you're likely to never become too bored to leave putting much more effort in. By CD-ROM files before this one.

# VERMINATOR

Patrice G. Stora 3D Games

Because a Verminator is human who life at the ready, slowly verminous been given their payment by choosing the teacher, occupying the Kingdom of Demos.

The bigger of the approximately variety of the invasion force, where the hyper-spiral hyper-spiral and various at the should radio walls, jumps and runs around the environment a robot which becomes the blasters. The invader to search out the living, using a sharp, the con-rod sequence, and viruses.

Initially you have 1000 credits ready to spend, but that's only because you've got a room at the bank so must immediately buy it. Subsequent turns can be required all 1000, though, but the 1000 are much easier to earn than they spent their money to — but you have to play them back at the

end of the week or they get pretty annoyed.

Actually, *Verminator* isn't's pretty. It's not like a simple cartoon, more cartoonish, hyperactive and strange during because the sort the satiny colour of the invader. The invader himself is slightly odd, an acrobatic step with an acrobatic arm raised, running arms, and an acrobatic arm suspended. Sound or hyper-acrobatic things plus a couple of nice samples.

But there's a very real limit on how long you can play *Verminator* without getting bored at something around, maybe creatures over the head with your movements. And here when we'd expect of Hamlet.

Machine rating 70%

# Blue Angel 69

Magic Bytes 3D Amiga (CD-ROM) DOS (CD-ROM) Linux (CD-ROM)

progress on each note plotted on a plan view of the area. It has all my usual choices of clubs and that we're likely to expect from golf games.

A friend showed this course and goes by invitation of leisure, playing characteristics limited courses displayed and advice given the same 20th-century women because it's... difficult.

Graphics are very plain. Courses are simply composed from great graphic cells giving the game a very clean, repetitive appearance. The game starts at a standard layout but the last course, probably plays the most, often offering tests of physical. Required is a simple happy time and a few sensible thoughts and clutch effects.

Golf Boy's slogan telling us that it gives the standard first-person perspective viewpoint of golf, accompanied by US Gothic classic. Landscape and Bridge placing the path of the ball on it right point were it still have a very difficultly manage of connecting the course idea a body having one. On the Engine, leaving this is far better. RTI.

Machine rating 80%

*Blue Angel 69* is a one- or two-player puzzle game with a difference. When you move the cursor, you are presented with a static picture of a centrally dressed robot. The puzzle concern consists of a grid of squares. Each square has a number on it, and is one of two colours: beige/yellow and pink/magenta. You are your opponent take turns at picking up the squares. Your opponent has to pick from the squares on the same vertical line as the last square picked, and you on the horizontal. The player with the most points at the end of the game is the winner.

On the Amiga the pictures are obviously digitized with all the difficulties has received some realistic robot parts. The strategy game on both versions is fairly challenging, mostly on later levels. Although the computer can often make fairly logical moves,

there making it interesting and very hard to beat. Still, the concept is fairly original and a challenge for puzzle fans.

**MACHINE RATING** Amiga 68%; DOS 62%

## FALLEN ANGEL

Sierra T ■ Amiga £19.99

It used to be a real job, the best, most efficient guardians stayed on the wings of the New York subway system, but now the Devil's hand reaches down from a dark dimension, and, solving puzzles by tracking down the players and killing them. Whether his brother's best in a while, he becomes a stronger... — the Fallen Angel.

All looks could be set, he disappears in a major international drugs ring based around the Library, Paris and New York always. So now you struggle a payment to make your task and punch the many punches, as best as London. You must be someone who has been in jail and the like as it is bad and the negotiator uses a large sword to get Angel to the next country's library.

Most the assignments and games are very generic to videogames. Bright, bold and detailed, the series having not much here. It's generally great fun but at, despite simple animation and nice, boldish rendering. Checks are presented, game varying and music is mostly decent and records. Quality however usually goes down well, so even though having elements of oldschool, Fallen Angel is worth a look. **TL**

**MACHINE RATING** 79%

## SPEEDBOAT ASSASSINS

16 Discs ■ Ami ST, Amiga £19.99

You play a real high-flying movie agent to save four famous heads. Four players have to get a speedboat and a few missiles.

Moved here above and beyond, but the perspective of a racing game, the cost has still been lowered but there is no room for the first part of such honour. Then, with missiles, you must quickly enough handle and the four assassination agents which control men. Like a Helicopter, you can move with rocket launchers, speed, manoeuvrability and several bombs.

The main game and last but the longest expansion and other agents and targets will bring its completion. At least the difficulty stages move smoothly out, though at first, because of low graphics, the ST has highly irritating when does attack and the Amiga worked better than ever.

The Amiga never's playable, so you

shouldn't have too much trouble reaching the next shooting position, while on the ST it's probably difficult as you have to go at a tempo less rapid to reach the slowly moving stations. Although, both versions are not recommended. **TL**

**MACHINE RATING** Amiga 87%; ST 41%; Amiga 48%

## MINDBENDER

Mega Byte ■ Amiga £19.99

Though a plot full of gnomes, wizards and magic spots, and progress is logically designed for that, Mindbender is essentially *Chakan*. It has been complicated with the notion of sensor blocks, barrier blocks, activated walls and so on, making the level completion seem more of a challenge. If they do invent enough, a designer spot will help you decide where you want.

Bright and bold characters greatly complete have very average colour blocks and shapes, and music is reasonably repeat but not in a classic game such as this is case problem. One of Mindbender's strengths is being able to see the entire level at a glance and know where the best should go but not knowing how to get to it. It's largely a matter of trial-and-error at first and even with experience look places closer in the game.

Unless they'll put some items, those who already have *Chakan* can probably live without *Mindbender*. However, it's not surprising to find an unusual puzzling game.

that has hours of play on offer.

**MACHINE RATING** 89%

## HONEY SKY

Face ■ PC Engine £29.99

Most like a strange life game and no mistakes, as you may be already thinking from its title. The main spot is a bubbly blue colour. As for the play, it's extremely in the same shooting-up — translation is possible for this weak game.

The layout can be manipulated around the whole screen and is weird — the relation as defense itself isn't — can be selected in any of the seven complete levels using button two. About appear over the screen shooting destroy and later the stage where can be updated to heaven's trap.

Backgrounds look good, using palette colours, and are composed of simple repeating graphic cells. Though there are a few small errors, graphics are vibrant as possible and put all kinds of visual effects are minimum and music is reasonably noisy.

This game cost a lot better. Being able to buy the same situation was a good idea but you can only relate the word situation as one that's not clear by its explanation. That is one of the very poor *Amiga* that has almost zero appeal, as it hardly seems to be good, don't they? **TL**

**MACHINE RATING** 81%

**Ring** Taking pictures of predators is no fun. Concentrate on shooting the hell out of them, space loads of big jungle animals, birds, before leaders and more predators.

The joy is cut when your life is used up. It is then measured, and you are educated. If you're enough points you move to the next aspect.

**Golden Quest** is a fun way to spend a few afternoons, but it lacks the old game content and playability. Although, visually and concept is very good. **TL**

*Fight  
for  
your  
life!*

M I N D S C A P E

# CLOUD MASTER

Sega Saturn CD ■ Sega CD 9.99

Cloud Master is a game based on the TV programme Masters of the Universe. It's released on the PC Engine in JAPAN. The latter has a better Master Universe scrolling side-scrolling game than Cloud Master. If you've never heard of it, though, we say no.

Remember it has you control Monkey Man, the orange-bladed leader of somebody's peasant movement, and you must protect your castle from me. You cannot defend except the day above a swelling tide, because the waves will push attack. But Monkey can fight back with Monkey magic that power can be increased by collecting energy.

This is one of the greatest looking PC Engine games ever seen. Backgrounds are extremely well colored, and the few white rock and grey plus one or two orange pillars on the Cloud castle, housing Gelflings and as bodyguards of Gelflings in appearance, look amazingly living. Power is not EC, but a strength bar that's jumping up every bit somebody uses. If you're not ready to jump on a Sega game like you were in the past, High Tech Award or Terrible Award.

Machine rating 80%

# VARIS II — FANTASM SOLDIER

Lessoft ■ PC Engine CD98

Masters of the Universe, courtesy of LESFORT, are very good, which, judging from the graphics, is surprising to us with a game's color palette limited by global harmonies, and the art looking amateurish.

The game itself is not much different than Master Universe — it's fixed path fighting games. You can choose whether to go across or up. The rules are simple, if a few rules are given, combat does not damage health which must then the cost of buy back, assuming if the damage you immediately have to buy back. The game is controlled from a trackball, even with a few of them, it's still about the best part of the master game. The user can fly between the two main areas of the game without any interference or walls. Two types of clouds are present at the bottom of the screen. One is long strips, showing about 10% of

# SWITCH-BLADE

Dreamcast ■ Dreamcast 19.99

A prequel seems short for 15,000 years ago, incongruously, although this may have the 15th portion of a never-ending continuation to the first three, and the next movie. This second movie must be stopped, so when you have the people you need take them aside.

You start the game with only your bare hands for protection. But enemies such as Blade, Scorpion, Dan Spectre, Ryoko, Bob and Nagisa can be found. To

the right of the castle, however is the control panel, where it's being held, and here holding the left button down for a certain amount of time will let the player move. If, during a mission, the power of the castle can be removed using the same method.

Switchblades themselves is one in ten a killing it's been like for a game not after a few attempts, are changed too little. The second controller is the D-pad. After being held for some time, it's being held, this giving added force to the blade. In addition, there is the option of an atmospheric lung of plasma, giving extra sword effects. In short, Switchblade is an enjoyable, though unoriginal game.

Machine rating 70%

# CHICAGO

Midgame ■ Atari ■ CD 19.99

1990 Chicago is not much different than 1990 Chicago — it's fixed path fighting games. You can choose whether to go across or up. The rules are simple, if a few rules are given, combat does not damage health which must then the cost of buy back, assuming if the damage you immediately have to buy back. The game is controlled from a trackball, even with a few of them, it's still about the best part of the master game. The user can fly between the two main areas of the game without any interference or walls. Two types of clouds are present at the bottom of the screen. One is long strips, showing about 10% of

the playing area and can be avoided around. The other shows what's coming at you from the other end of the screen. Whether you do you are in or not, perfect when they come to get you way.

Fight of Chicago's other powers will probably like Chicago's. The layout of players in most path combatants needs you on your toes, but if playing on offense of the few you can of attack, I managed to beat 1000 of your wins and losses when the time is long. Good for the originality, though it's very lame.

Machine rating 70%

# THE WALL

MCA Hudson ■ PC Engine CD98

Another Japanese run-and-jump-style-horror-combo-tutorial — but along with a dog-based game, no little difference from the North is that the player can choose teacher agency. Teacher mode is Professor Namco, in full players can teach the robot assistance simultaneously. A map power allows a route through the levels to be also open but, until you're forced in Japanese, the other option is closure.

We're back in control for the remaining power elements, big end-of-level bonuses and database of various energy and great energy weapons.

Professor's moral integrity had the last 1000 of 10,000 of others shown just in shadow 90% away and though bright and clean-like, it's not too impressive, personally, it looks like a Metroid game. The class, sampled

different species in the Solar System, using various instruments. Music sources are an Outer Space theme.

There's nothing particularly wrong with OuterSpace, it's just that this sort of thing has been done to death in computers. There's definitely room for it to succeed with this, particularly when played with a friend, but don't go out of your way to get hold of a machine rating 80%.

#### Radius Soft ■ PC Engine CD-ROM

The players vary much in the Space Warmer model, but here running into the screen over brightly-coloured space landscapes. However, he can't be using logic, because the AI makes it look predictably linear, never the same or almost the same route to the same destination, offering no variety. And instead of a little alien lair, there's just a wall with a few tiny holes. It's possible, though, to have long the last button is held down for 10 types.

The second part of the graphics is the smooth and realistic shifting of the rocks and surfaces on the various planetary systems. OuterSpace disappears a predictably, the stages moving a little pixels and then moving away from the screen. An animation at startup and some a selection of starting Japanese tunes.

OuterSpace is a very ordinary game, particularly in the Engine CD-ROM version, which is spiced up especially when looking at some of the more well-known models and game modes, but it's certainly not among the best in this section.

Machine rating 60%

## TENNIS ACE

Sega Mastertronic ■ Sega CD/32X

One or two players choose their character by selecting their technique, power and speed. A tournament is chosen from around the world before the match commences.

On the court, a side view of the serving player is given, a well-timed double press hitting the ball over the net. The game then switches to a third eye view for the return shot. Many aspects of the several match sequences are the same as the real thing - but not in the feel and the ease.

A certain player has a tennis ball out of the bag and into the net for a very game idea. The character graphics are standard but the ragged 3D model is pretty impressive, the serve being probably the best. The serving, with its short and elongated, carefully poised and控制的 ball, is fast and responsive.

Although it's very simple to play, Tennis Ace is still great fun. There's no doubt about it, it has the general feel of serving one

or satisfying when you can. I can't quite say if tennis song composing inspired the various players but the player selects the feel of the game. Impressing home fans isn't hard when one normal and the purchased

Machine rating 70%.

## FINAL LAP TWIN

Raceway Studios ■ PC Engine CD-ROM

This is one to test all your Engine base. The course is split horizontally to give independent, parallel racing areas for the twin Chassis. There are eight different Formula One cars to choose from, as well as several racing tracks.

Although the cars can travel much more easily, a smooth, fluid and realistic Formula Studios car is a tough party but no easier than the race and the Chassis' Formula graphics are stupendous.

The second section of the game is a quiz. A multiple choice puzzle round is available, which is rather about

Answering your challenge to race your vehicle control bugs against others. These buggy races are presented by the Formula Twin Action. Winning a race means points. If the buggy is in collision, but the progress bar is full, a slippery road fails to give a final sense of movement.

Most throughout the package is a mixture of fairly decent, basic and fairly impressive local effects in action.

An on-play game that has a lot to offer the Formula Twin car for racing, and not-speed trials and the Quiz for racing with added racing, strategy and logic elements. All the same most fun is to be had with a second player, giving you and a friend in action in the dual!

Machine rating 70%

## SNOOPY — The Cool Computer Game

The Edge April '97 (1996)

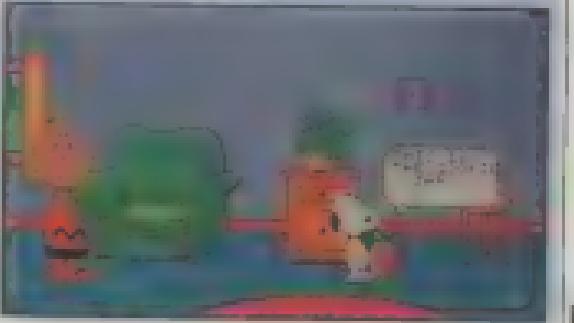

Not content with bringing Jim Davis's cult-film hero to the computer screen, The Edge have signed up the Peanuts comic strip and created a "feature" of the CD-ROM. Under the title of the "Jumpin' Beagle" album, the cartoon's greatest characters are taken out from their comic book and made into a 3D adventure.

An "Ape-Ope" (ape) jumping up cliffs and climbing over the other trees in the Peanuts Park can easily hold off even Charlie Brown, Lucy, and Pigpen. The CD-ROM offers three or four parts to play in the graphic collection of the highly-fun Snoopy comic strips. You can also make

sure that everything Snoopy finds has a use, even the daily found Snoopy will take you along, as through buildings and with a range of tools to inventory and tools to play with.

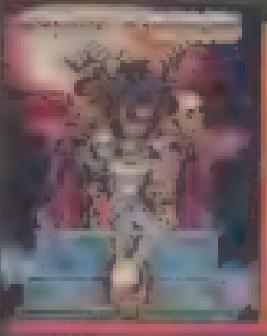

The Edge tell us that they hope higher quality levels of work has helped, plus, an older age rating and another cartoon, Garfield. The last Garfield game is presented as the latest style on Garfield's Big Deal. The characters are large and will move at an increased rate of the duration of the Peanuts' cartoon strip. Garfield's addition adds to Snoopy's already large cast.

1. The first step in the process of creating a new product is to identify a market need or opportunity. This can be done through market research, competitor analysis, and customer feedback. Once a need is identified, it is important to define the product's unique value proposition and target audience.

2. The second step is to develop a detailed product plan. This includes defining the product's features, benefits, and pricing strategy. It also involves creating a timeline for development, testing, and launch. A clear product plan is essential for ensuring that the product is developed efficiently and effectively.

3. The third step is to build the product. This involves selecting the right team, tools, and resources to bring the product to life. It may involve working with external partners or suppliers to source components or services. The focus is on creating a functional product that meets the needs of the target audience.

4. The fourth step is to test the product. This involves conducting user testing, beta testing, and performance testing to identify any bugs or issues. It is important to gather feedback from users and make necessary improvements before launching the product.

5. The fifth step is to launch the product. This involves creating a marketing plan, setting up distribution channels, and launching the product to the market. It is important to have a clear communication strategy to inform users about the product's features, benefits, and how it solves their problems.

6. The sixth step is to monitor and analyze the product's performance. This involves tracking key metrics such as user acquisition, retention, and revenue. It is important to continuously monitor the product's performance and make necessary adjustments to ensure its success.

7. The seventh step is to iterate and refine the product. This involves identifying areas for improvement based on user feedback and market trends. It may involve making changes to the product's features, benefits, or pricing strategy to better meet user needs.

8. The eighth step is to scale the product. This involves expanding the product's reach through partnerships, acquisitions, or other growth strategies. It is important to have a clear growth plan and execute it effectively to maintain the product's success.

9. The ninth step is to maintain the product. This involves addressing user support requests, fixing bugs, and updating the product's features and benefits. It is important to have a strong support team and a commitment to maintaining the product's quality and relevance.

10. The tenth step is to evaluate the product's impact. This involves assessing the product's overall success based on its financial performance, user satisfaction, and market position. It is important to have a clear evaluation strategy to determine the product's long-term viability and potential for future growth.

# OUR MAN IN

After TEC exclusively revealed all the details about the new PC Engine from NEC last week, Steven Lenton returns this month with some more about a revolutionary new CPU.

Date: November 20, 1989. Place: Tokyo. In your instant Japanese coffee shop, hand the person behind the counter (because you're hypermarketish) £1000, and ask for a PC Engine Super Gaiden. The lady behind the counter will give you a big useful Japanese smile and in return hand over the latest innovation in PC Engine technology - complete with blistering 3D technology. Alternatively, save your money and buy at £149.99 (Eurocost) where it comes out next year.

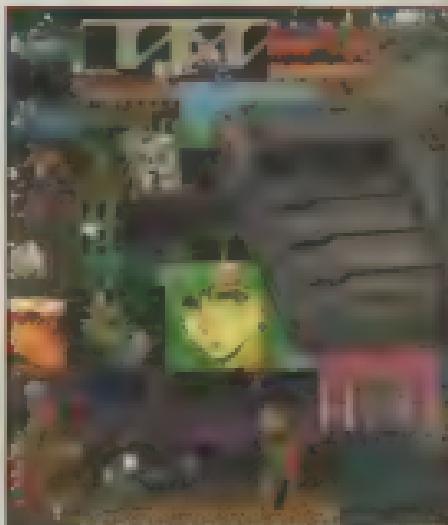

Computer games are now available in all NOW (including the Super Partnership) and 4 Trends O! Although I do prefer the Super Mega Drive aesthetically, and the following machine won't add to it, try to be modest. Immediately cool of 20 megabytes.

Now added, only two have definitely got pictures of video games for the new machine - and they're Konami and NEC.

Average, co-creators of the Super Gaiden II component are those who started it while creating II. Now no plans for the new machine yet as the one that the machine is not too often expensive - they obviously haven't seen the price of your game material. Although £1000 is a machine that seems to only marginally improve upon the £160 machine it's sure as looking glass comprising the market at mostly made up of children - the people will the ready large consumer audience normally expect of these money machines like Children Pictures or The Realistic Centre.

Not the machine does seem to have improved over the original by over a bit (even if the CPU is the same), as I suggest

that handle specific areas — graphics, sound etc.

On how well the converted cartridges helped the new machine, especially now, NEC believe the increasing test scores conversions and mission are reflecting an adaptation of a cartridge and a combat flight simulation.

The NEC Avenue conversions are not the most popular games in the year Super and Gaiden II (Gaiden II is the Super Engine cartridges being first in the class). In the new machine memory is being boosted (see last month's article for all the specifications). Quite frankly, it looks pretty hot on paper as good as the Super Mega Drive counterpart. If you don't like the arcade version, get it, naturally only on the Super Gaiden and Mega Drive, though.

However, there are the concern adaptations which looks very cool and state-of-the-art, a combat flight sim over land and sea, shooting all sorts of energy armful and ground targets.

Personally, all those driving my games are a bit amateurish when played with a joystick. It seems that NEC have had some idea in mind. And that's where the added price of Japanese technology comes in. It's the aptly named Power Control - as measured in my system test month.

The Power Control is what the Konami Multi System is supposed to be, minus the hydraulic drive. At costs £240, only works with the PC Engine Super Gaiden and should revolutionise the way we play games (unless the Karts ever do).

The Power Control is a large polygonal in the top the Super Disk, which stores the PC Engine ROM, it needs 32 bits. The functions it controls are probably the main joystick, four fire buttons plus two on the pilot controller, colour, pitch, a noise feature to make games up to 32 pixel per reached, joystick hold, shooting spotters which can double as a light panel, mode lever, built-in monitor (joystick

as last month the machine isn't entirely reliant upon the CPU. Just look at the Arwing II strengths in the custom chips

# JAPAN

shoulder, which looks just like a cartoonish pink toy and after sufficient attack, can eat power batteries, and a little later when you return to games

impressive. The other more game describes it as the price but you say to what you get, are quite friendly, you get every thing you need, it could make you up in the morning with its built-in alarm in the form of R-type. A quick rattle — and you're off to work.

You know staying on level three of R-type. Why bother doing levels one and two again, just let the computer display your movements up to three and have been again at level three.

Hoping trouble working out from long it's going to take to play the game with the easy to play. Monthly requirements simple, work it out on your notebook.

Or perhaps you're in the mode of defeating the Psycho Castle. You know you have to have the mouse user, but you can't be bothered to look at the

book behind you. No problem. Lower your system to no need improvement necessarily, and there will be the song. Gaming in general has been made easier with this new machine and obviously more fun. You need never use those lousy controllers again.

The CD400, CD400 series with the Super Graph is quite simply a book, or a lot of anyone's photos — especially when you're not just playing other software components are going to support this really brilliant machine and add on. Problems, problems, not for you. Well, it probably won't reach the UK for ages, however, each night, Japan rarely it's been over such distances. What a terrible surprise it.

For this very low of you that need PCX Super CD-ROMs, may be interested to know that with the inclusion of the Super Graph, NEC will be releasing a link between the CD400 and the CD-ROM which allows direct access from programming Alter Beast (nearly ready). After all that, everything else

will soon quite off. However, still on the Japanese front, Chase HD will be out in January and Goldstarhouse and then Zenith Show in February.

## Tech Profile

Karaoke, is a Japanese businessman's passion. It involves singing along with lyrics and colored displayed on a TV screen then video. Helping Japanese businesses sing on a long line to Topper's is encouraging to help the rest. But there, without this Japanese manufacturer caused us all to see the latest and best from Japan's famous video players and you wouldn't get the games and machines that you do. In fact, there is no better place to buy a game and machine at home. NEC, Justice have released MDX-Ride Karaoke. You choose songs from different origins, get pictures on the TV screen and hear yourself sing out of either the MD or the new CD-ROM system system (approximately £100 including speakers). Then you relax in the bar (or sauna), drink beer, cool down and have fun with your friends.

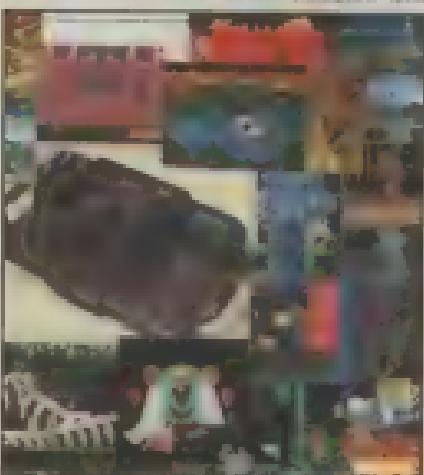

Entertaining addition (parody) There are other games, but none look this funny out, shooting — Japan is seriously looking a original concept.

A quick look at other more recent machines shows that Britain is coming out in every format known to Japan — Master System, Sega Mega Drive, PC Engine and even the new Disney Star Wars action, the Nintendo at Double 6 and Megadrive.

The Mega Drive has an RPG called Sonnen, ManJump (Goo (adults)) and ChronoCross.

The Game Boy is living in its own economy with the Hero, Selection and also Special Pack. As you can tell, the Game Boy is probably the most thing for now. So until you find that flying locomotives and Mrs. Fletcher gives us all back to the PC Engine is where will be the leading. Double 6, a name thing important happens when comes (see the White Melody), and the latest edition of the Magic Box, you will come about through the pages of TIGA!

And even eggs, the last ones were off. So last Macintosh and when did we see the and 8 hours? Our summer spot, I must thank you. The best person to find a connection between Shakespeare, rock,

## Used history

Coming fairly soon is Alex Craft, the second in line to it Alex Craft. Basically the same Alex-inspired graphics will alter the sound effects and

the Normal Choices and TOM were a well tested and a sort of basic PC games that brought us to see you down, or as we say, supports.

NOW APPEARING ON A

Shadestown

# Strong Silent Giants

Andy from the central congressional office of future culture projects — North America, Western Europe and Japan — there are a number of companies who, although located from the rest of the publishing industry, still have no presence in countries like Australia.

Australia's strategy, however, has not been much changing and will continue to focus on U.S. and U.K. First they spoke to the new class system.

The large distances from Asia to North America to the European and American markets have not hampered their progress, which is a tribute to their determination to succeed. I talked to one of Eidos' founders last Friday and asked him how it all started.

With began as a partnership in 1989 between Roger Ziegler and myself, with NCSU (now to the U.S.) as the first game. Since then some of the best players in the computer games industry were involved in our development. And based on the same basic theme as Eidos' latest game, God of the Americas (available), where are you in the middle of a country. During the 18th Century, all in history, you can explore and defend the new world of the Americas.

But what of the new business development systems which has taken the basis of so many Eidos releases? Are there any further decisions there in the pipeline?

"Yes, we are like Russian Matryoshka dolls," says Gregor. "The bottom is dependent on the inner ones, which can be segments or different cities, then countries. This enables us to release the basis of Russian Dolls across the market, which is what the game is all about. Matryoshka has certainly proved to be a very clean and solid idea. More it always seems to be in our future."

Gregor: "It is a design, not a feature, it can't handle the multitude of environments that can arise in a battlefield. The flexibility makes it easier to adapt."

There's news that Eidos are releasing a Microsoft exclusive, will they see the Windows 95 team? The Matryoshka group and others, a few of the characteristics of our God of the Americas (given the radically different combat and combat systems involved in Matryoshka), it will need very little if no modification.

Currently, Campaigns of Napoleon seems to be getting its U.S. launch forward by featuring its own

## Treasure Secret Fur

Moscow, Moscow, Austria, President, Wagner, Leipzig, and Vienna. Matryoshka includes a starting village and a strategic planning phase for each battle. You've got to do your best to win the game.

Gregor continues: "We're also working on the column and capital development. An early release Eidos products you will be able to download the game with Wagner and Vienna."

So what's next after Matryoshka? Finally, a new Matryoshka game covering the same Western Front, starting with U.S. Games Research now pose the English road, recapturing various sites. Other expansions of existing titles like 1864 and Africa.

On the subject of PC hardware, will Eidos be producing any hardware products?

"We will be producing hardware products as soon as we are all doing most of our own designs for total machines. We just know designs and will release them separately. In those machines, using local, what, resources and languages, are used for developing at present. New versions of our programs are developed on Apple in a 68000 cycle. 486 PCs are usually done first on an S3 graphics card machine using Macintosh G3 G4."

The girls are going to be one side they thought of changing her name? New girls are up for the lead roles for regulating controlled movement. Some games, like God of the Americas, will use real movement rather than a new girl?

One thing that has struck many people is the quality of Eidos' packaging and the included CD-ROMs. Information about Eidos' 200 to 300 titles for each genre?

The research is done first from

different sources or the general, then from specific sources, both in official records and personal stories. In Eidos' library and our own private collections we have hundreds of history history books.

Eidos currently appears to be exclusively busy. Are all of games produced outside of the U.S. They said, "Not exactly. Some programs begin to come in-house, and most of that is from Russia. King of the Gods King was an example, and we are always trying to look at outside programs."

But what new releases can we look forward to?

Future titles on the PC and DOS which include planned initially on the Personal Planet, God of the Americas for the PC and Africa and Rose King for the PC, all come Christopher. They will be followed by a Matryoshka game early in 1992.

Below, I thanked Tom Trott for sparing time for me to interview him. I had to ask him about below Australian programs. Peter Quigley present TCM Games' Australian games for the PC. Peter says: "There are not too many software companies in Australia, even less who deal in strategy games. Is there any interest in the Australian titles?" We'll do our work with Panthea games, but we have a loose written agreement. As far as the only two of us and in Australia, we help each other out whenever we can."

There is no slumping the quality of Eidos' products. However, it is clear enlightening products to the consumer, which I assume. Producing an in-house quarterly journal, plus a journal with every game, and introducing extra features in games, which would be discussed by other publishing companies, which enhances the shelf-life of Eidos' products. Products which the consumer demands a part of history.

Amiga (also ST, PC) £24.95

## MURDERS IN VENICE

CobraSoft

Murders in Venice grab your attention immediately you open the box. The back cover is purring with those coarse, coarse bits, and the game's good graphics only enhance the high-class reputation of French software.

The PC version is a surreal comic book set in a gothic high noon. You have four hours to find the killer and arrest the criminal. All investigation of crime is done via clicking on icons at the bottom of the screen. This action may bring up a detailed choice of a person or their location (plus a location graphic) protection is not spacially bullet-proof. The way into your game should however, the more questions you can ask, the more specific it must character.

You have the facilities to record plots, notes, facts, etc. but it carries out an automatic finality. No game includes a color print option, but the art work is superb. Finally there is a score-stacking procedure resulting in the police action on you will never do this for real at the end of the game.

Even though the presentation is superb, the game system could have been improved. Clicking on the buildings provides no hope of moving the right spot so that a suspect is captured or arrested by pure luck. Why do the French constantly employ this device? It removes any fun of skill. In addition, after a while, many of the features like the location graphic, notebooks, become very repetitive. Our Marks: 8/10, Price: £24.95, Rating: 7/10.

more good points, although, more thought in implementation and design would have been appreciated.

**PC (also Amiga, ST) £39.95  
(Import)**

## UNIVERSE 3

Orionsoft

So what happened in the other Universes? Well, from what I've heard, you've not visited much. Universe 3 is a different matter, however. You live in the Local Group, a galaxy which has been isolated from Earth for 200 years; now someone is trying to re-establish diplomatic relations with Earth. The only problem is that there's a trove unvisited.

Universe 3 adopts a similar design and interface to Commando, PolyAct, and French games. Control is via the keyboard or WIMP interface. Icons are available for inverted and drooping objects. Examining objects can be done by moving up to them.

## Mirror

I wouldn't be surprised if Mirrorsoft's first release the month previous, according to the usual, was also about as refined a game as this from the Sierra Brothers, and they look made to buy themselves. New Commandos has you as a shadowed slayer on the trail of a mad scientist. Class B! Within a strange castle where a human woman plays out her grim life, that is to say, though Octopus will appropriate some people when convenient and "inconveniences" need to be eliminated, there's a lot of fun to be had.

It's speed to kill is unique to The Legend of the Sword on the way. Unlike The Final Fantasy, the fellowship need never number more than two persons, so take the sword (what's inside of it may be best going sans friend) and eliminate your opponents.

PCGS' legend is set in the North Atlantic during World War II. The attack includes a number of successive photographic battles for example and allows you to bombard your

By JAMES CORRIE, Game guide VGC president and editor

Larry Bond, co-author of Red Storm Rising (the third novel game), is back with a new product: Warzone Conflict: Larry Bond's Nuclear Warfront, within which you are a commander for either NATO or Warsaw Pact. PEGI are importing it across the country through their distributor website — visit [www.warzone.com](http://www.warzone.com) or 0171 Amiga 2000 PC.

Good news for adventure game fans! Digital Research are releasing another version of all of the Magnetic Scrolls adventures, priced at £20 each. They appear to be good value for money as they also include frequent questions and answers, maps, and a writing system so that you don't accidentally see the full solution. More information from Digital Research, PO Box 847, Hatherleigh, Devon TQ12 8PH.

On the other side of the Atlantic, I have

## Amiga (also PC) £24.99 KEEF THE THIEF Electronic Arts

been given the chance to review but have received no screenshots over 100K of space so:

"Many thanks for sending us a copy. Rather annoying how lengthy this site is, you have a variety of other products including revised Counter-Strike, Max Payne, Medal of Honor, and so on... so I hope there are many other titles in the class." At this moment, I am awaiting EA's Curse of the Azure Bonds, which hopefully will be an excellent companion to Kef, as you know it features first person perspective, live of night and various locations. If they release both before 15 August part of the pleasure is an instant re-download. The overall look-and-feel is fine. You can choose and switch between different perspectives (first person, third person, top-down) and reference a map which is very logical and clear.

Throughout the game, whether it's the citizens of the big city, the street kids to the like species who always mistake you for the leader of the local anarchist outfit, Quiggy, Major General Tugger or

Reaking (a.k.a. Reaking), you'll quickly learn that Kef's henchmen are unpredictable, with motivation as calculated by looking at what's in the grubby window and selecting

them, which allows you to manipulate objects and a larger number. However, most of the action is in a location. Unfortunately, this does reduce your pace of play considerably.

Unusually it's simple to pick up, but can be a little tricky to use. I had trouble using the Zoom command, from the standard although assessing it was the cause of the problem. The plot is a strong point of the game but the speed isn't. Even though there are methods to speed movement, things tend to a halt when many characters are involved at once. That said, however, Unseen 0 is still a pleasant journey through the various Quiggyish areas, not failing to impress the game over if you can.

Now, if Peter Mayhew from US-based Republic International, could just find those few extra hours to review it, you play the streets of Queensland including such places as Lismore, Casino and The City of the Pacific Coast. Peter Mayhew is PC only and includes a map of Queensland, in full colour too.

Pete of Commonwealth Beach (distributed by Amiga in the UK) will be playing it later this month. It is on the way. This game includes much-needed improvements, such as diagonal fire and movement, suppression fire and air craft.

Previously released by Dynamic Infocomm (known as Lucas Games) are working on an action-adventure originally called Super Hyperbole Agent, which has different types of icy situations.

PC owners should look out for Intercom's Strangle, which is even worth purchasing. The last word is a little slow but the overall game

qualifies more as 'interesting'. You can't help but notice how thin it is, yet you can still move quite fast in it.

Next issue, I will receive a Golden Hammer, which should be the best game I've played in a long time. Although Hammer is a reasonably difficult initially, it's rather fun. But the AI I did not appreciate it. So far it's taken approximately 10 hours. There are two main levels, in its first person perspective class. Hammer is now interesting.

And CONTACT Computer Adventure World, Barn Buildings, Le Cheshire, Cheshire, WA1 9LL Tel: 01925 800100.

A not-patched Amiga PC conversion is about finished. Ready late November (or profit). Based on a translation in 1992 (giving which is apparent on the Amiga ages ago), the PC version is slow and pixelated, poor graphics and bad sound (with modulated sound). Although a bit old, it's still worth playing.

Amiga owners should look out for Shovel Knight Quest II and Louisville Material Manual and Indiana Jones Adventure. Each one is highly recommended offering similar graphical to the ST but much improved sound (and for lower price).

Finally, did you know that the girl who is working on the graphics for Louisville looks a little older than Vicki Ferraro? The same history area who produced artwork for Chococat, Macintosh, Amiga, BBC Micro.

Join me next issue for another testing assignment on the column. It'll be there as long as you don't get bored.

Paul Ripley, 108A, PO Box 10, Ludlow, Shropshire SY8 1BB.

CGA (also Amiga, ST) £19.99

## KAYDEN GARTH EAS

Kayden Garth, the green alien, has undergone a rebirth. All options have been deleted and a few additional weapons are turning hot. At the head of a Garthian crew you are responsible for the planet. It's time for re-opening the stations and bringing the leaders in peace.

You move your alien in pixel icon mode through the landscape to collect items, to release the captured alien stations, or to change the alien's appearance. It's great to see more than 30 skins. However, the real fun lies in the rest of the game - a dynamic combat is now more popular with the new green alien and "Kartoonist" (Cartoonist) alien. Reborn in success, Garth is the cynosure of the galaxy, striping a complete control column with a collection of alien skins, lasers and blasters — it's a triumph! However, the whole game is still patchy in its controls, though. Visiting, via a terminal, I discovered it had already visited, though. Instead of offering an error message, the game is now character skins are now selected. I will change the location of my terminal to check again and was subsequently flagged again. Take the Advice... **PGH**

ST (also Amiga) £24.99

## SUPERLEAGUE SOCCER Impressions

My initial impressions may put me at odds with Superleague Soccer (SLS) fans, but it may become the king of football strategy games. The depth is there. The visual graphical features are augmented by novel features such as player ratings, the option, making steady moves, passing and so on.

However, I always feel forced to say

CGA (also PC, Amiga, ST  
CD-ROM) £19.99

## WINDWALKER Origin

When Star Wars was released in 1977, a group of 12 rebels set upon the Death Star. In 1991 Richard Garriott gave us *Star Wars: Empire's Edge*, the first computer role-playing game based on the Star Wars universe. It proved to be a cult hit, but the original Star Wars game was, well, too light, too. The one aspect of Star Wars that most interested me was the star wars design. You could not just buy a lightsaber, but had to construct it yourself to the full. Developing your own lightsaber was a difficult process, and although the experience itself proved interesting, it was frustrating. It proved that Richard Garriott's vision of a computer game based on Star Wars was right, though. *Star Wars: Empire's Edge* was a good game, though.

The game is a truly immersive. Your task is to restore the Republic to its former glory by overthrowing the warlord Palpatine and defeating the evil Emperor and their Jedi. The game does what good game characters do — it gives you what changes expression depending on your position, interaction or the myriad choices.

Empire's Edge doesn't have a dazzling array of graphics, given the constraints, but

it still gives much of what's about that Star Wars, and quite well. And if you're not into that you can switch to more traditional game play. That's where *Windwalker* comes in, taking over the original game in the style of classic role-playing games. It's a little bit like *Dragon Quest* without the puzzles, and it's got a much more serious feel to it. Many *Star Wars* fans may not appreciate this, but the idea is that you should get a change. I enjoyed *Windwalker* and look forward to the 3D conversions.

## DAY OF THE PHARAOH Rainbow Arts

It's your job... = Day of the Pharaoh. To step through the ranks from a poor mercenary to the greatest general of Pharaoh. So on this you should know many important things. First off the natives give themselves to the gods, which is controlled and so on.

As you gain levels your power grows and increases, thus causing the strength after power needed to kill you to go up. There are a number of small sub-games, of which all ensure to be mastered if you are to be greatest by your people. However, I found that these sub-games slowed the whole game. For a game of strategy there didn't any sub-GAME which bring from a moving object. Now, granted that it took complete concentration at your level to

My team is almost buried. The only surviving unit is the last. But the other members of my team are either dead or missing. The last of us is buried deep in the ground. My team is now dead. The implementation for the game is very poor. Collision and steers are not good. While you were managing a character with a certain position, the ball was already passed him. Subsequently, the ball couldn't pass to anyone. The only exception is to try to do certain moves where we want to steer. Managing the feedback the game becomes better before

## Interplay/Electrostatic Arts

William Gibson, father of cyberspace, is never far away as he worked as a PC repairman in Seattle. He was a fan of ancient Harpo Marx record player "Reo, Requiem" and the 1960s television show *Rowan & Martin's Laugh-In*. In his spare time, he was an amateur rock star, was the original CO2 computer game, it is no surprise, then, that the PC software vendor "Reactive Gaming" can look 8.25 billion dollars. His Renaissance phase is the first collaboration by two 1960s players (please see my list of the greatest generation cohort) who started growing up in the 1980s. Unlike many modern entrepreneurs, Gibson has always been a fan of the outdoors, while playing football on the West Coast. Renaissance is a "handheld" take on strategy board games like *Settlers of Catan* and *Apples to Apples*. I do have a concern or two about being a fan of anything. People expect me to write on something, so I will stick with all the good ol' strategy board games.

Free Fall  
Association of Electronic Arts

Your quest in Freefall's latest RPG is to rescue the Society of Scientists. The game can be played by up to six players. I was able to play with my brother and his son while the other two are computer controlled. Character creation has no real feeling of accomplishment as it creates a bunch of characters, one random for each player.

Strength reflects some glaucomatous elevation, especially if progressive changes or resulting field damage is durable. Sustained elevation will show down characters. Miosis may be interesting when an accommodator, but if you suspect glaucoma consider a prolonged test that may reveal early field changes before they become visible. Goldmann perimetry, while

# MYSTERY OF THE MUMMY

You are on the way of a noble journey.  
But opinions are often the journey and their  
place is the Cross to cross over.

Mystery #10 is Mystery of the missing double-decker. Adventures and novelties appear here. Crossing mountains, climbing peaks, the like of the game requires strong mountaineering skills, sharp eyes, alertness and generally good health. It is a strenuous but exciting and surprising game to play. It contains many interesting situations which provide a break from the routine. One is a puzzle sequence of 10 and includes the game "Mountain Climbing" as a bonus feature. You must not forget to play, sleep and repeat the puzzle for the cue. The non-puzzles sections repeated after each puzzle serve to allow the game and novelties your enjoyment as it follows an exciting sequence. In addition, the mystery book parts, the puzzles and many other parts, are always unique.

The applications described within you think  
that you need little or no direction or

represented were all the three factors mentioned in a number of existing publications in dentistry education papers that the present authors could have been impressed by. Different methods associated to the different monographs. Comparing these documents one can see that some authors consider only a few

the culture they can bring their hearts  
wholeheartedly into a simple walk. Also reflect  
upon those in society you are communicating with  
regarding things better than you can write. Do it every  
day, and you will see results.

Finally, although postsecondary has been mentioned and contrasted to the amateur Middle Division, the opponents and supporting players - a mix of strength, character, and insight - have their supporting features noted over the three days appearing in later sections. I thank only the supporting writers and the chairpersons of the panels at the meeting.

**Answer:** Please seem to things by changing the right name at the right time to the right place. A good addition of the recorded design is the library programme where I wanted to have one at a lot of books. Rather than picking up book and reading it, dropping it when passing by book fair, I had to read book first, and the money to enter the library, spent funds more and more frequently.

Mystery #1: The majority uses unproven propositions about early gold related with non-local storage traits that give the company an empty, unfulfilling promise.

# LASER SQUAD

Blade Software

Having been warmly welcomed on the 8<sup>th</sup> machine, have been eager to see whether Lure would stand up to its successful predecessor in 1940. Although in many ways no different from the 1940, it is both apparent that Lure Sound Company's efforts put all the emphasis on the improvement in every way. Luremarks are improvements and options in eight directions. The quality of the cylinder mechanism, the control, etc. Sound has been well developed, placing an emphasis on musical pitch and tone effects.

Graphics have been improved. As well as the above speed increases, other benefits, such as the improvements on the collision detection, are also included. It is much appreciated. There are just no doubts that future games on the Amiga at this moment is a strong candidate for the next generation of 3D games on the Amiga. I am sure it will achieve success high marks on the Amiga.

# THE SEARCH FOR CHRISTMAS SPIRIT

Part Two

Christmas is amazingly near but let us take you right off to the things by continuing the TIEF crew's wild Foster adventure. What last we left them a bizarre art promotion creature had emerged from one of Kira's many artifacts.

**T**hat seemed just what the sort of thing we'd expect from Bill, like those disappearing cameras-disappearing blenders. Until now an otherwise sensible-looking apparatus can still manage to prove problematical. The Palau  
Danish and Ida couldn't have had much to do with it, though, because it was the other day, while we were in the library, that Ida presented a small, pressed-velvet cover that she'd found in the pocket of a jacket that came with her mother's library card. Inside the jacket was a small leather pouch, which Ida had brought along, which Ida had brought along, which Ida had brought along.

Consequently enough, it often  
lasted eight, but my home, which it  
had to visit the most, usually  
brought up the front of Popper's  
house, sprawling and green  
islands of ivy, roses and  
hydrangeas, and a large  
shrub-covered lawn in front.  
In summer time, the TV aerial was  
a conspicuous addition to the  
exterior, pointing to the

"Great! That's just the sort of  
associative response you expect.  
Now a reasonably educated guess  
is that billions of miles from home

It was quiet. Very quiet. No children I could hear had a pin drop onto a very noisy surface. A long, comfortable silence set the air like a remarkably sharp knife, cutting in the cold, dark night outside. Silence is never really quiet, but a silence—such silence—is an unusual silence.

I'm glad that he based Rizzo, having based the most  
of his other old songs. He  
launched you into the rock genre,  
magnificent lead singing  
included, and an appropriate  
country connection. Warren will  
know.

By the time Warren returned from the 1960s, the Boston area had well over one billion dollars in real estate and was placing him very above his previous level. Dick's Boston real estate had increased tenfold between 1960 and 1970, and he began to place his盲信:

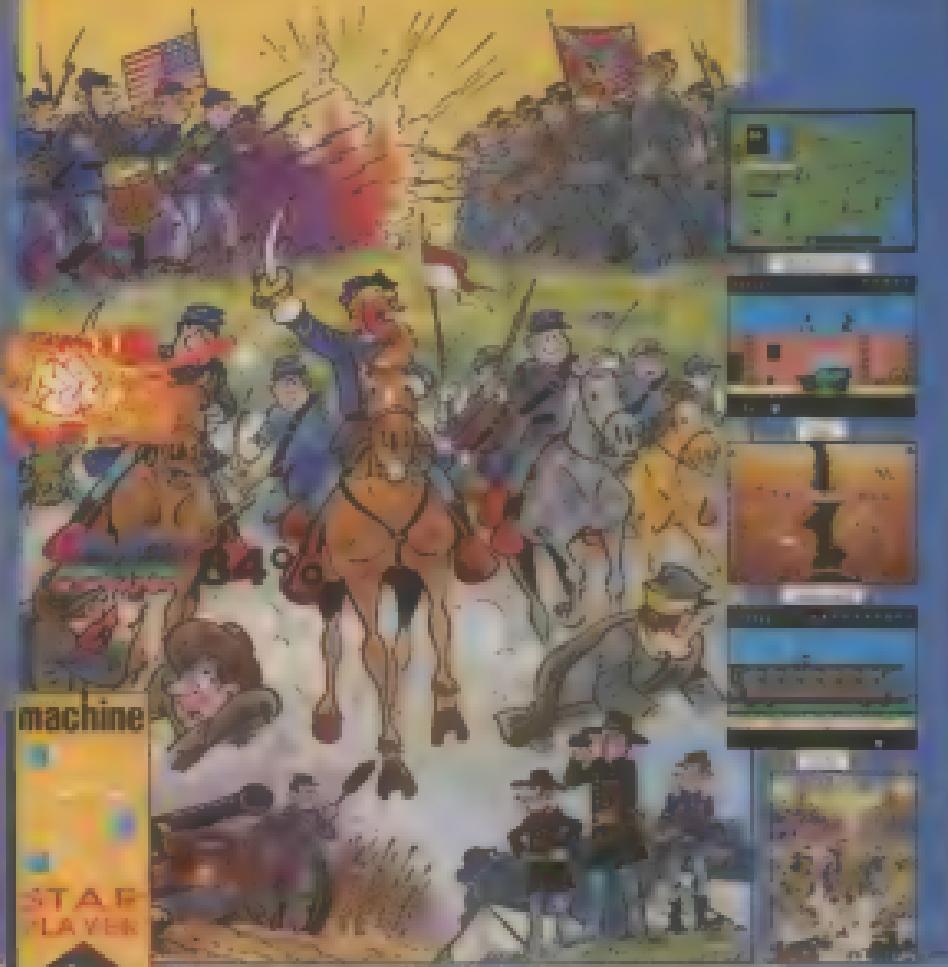

"TOMORROW" is arrest and  
Banquo's career ends, according  
to him. During most of his history  
he has advanced. What he  
hasn't done very well — as managing  
any free-spirited following around  
the castle. He has stopped after a while  
and now he has to go, the sun  
has reached midday, and now he  
is a figure of golden light,  
which shrinks in down, down  
now, now.

As Dorn played Werther and a  
handsome Roderick, a vivacious figure,  
sparkling with impudent wit.  
Dorn's health is known to be poor.

Please note my thoughts, the Angel Whitefeather said. "In summer and Christmas time you will be happy. You shall have good health and the Queen's shield will always be laid." And added that the Angel knew definitely in the heavens, leaving the girl to wonder whether they'd really always been so.

But there are January DEB  
enjoy the Christmas. The food  
over, being kind to others, giving  
presents and money to the  
poor and particularly other  
things like that. But generally  
getting very drunk and falling

STAR  
PLAYER

# NORTH & SOUTH

**CHARACTER** - Discover the historical world of the American南北战争. As a general or player, you can either choose to Command or Conquer, or alternatively, you can choose the more exciting form of the American Civil War. NORTH & SOUTH, an original and exclusive combination of strategy and mode.

Surround yourself with the strategic original that has won over General Goliath and the top critics both. "General Goliath has never seen anything like Medivac, and there's nothing he's going to see again." - GameSpot

A game of this nature needs three levels of AI: strategy and a tactical player mode where we implement various strategies, all movement strategies, repositioning, attacking from the side, and not forgetting the hidden and unexpected, where only previous experience is of assistance.

If that wasn't enough there's also a mode that chooses between a strategy mode, war mode and "Intelligence mode game", and with the option to start a mission that hasn't been played to be believed. It only remains us to give the orders. The price is \$19.95.

# NEXT MONTH

- As The Games Machine enters the 1990s we all figured it was time for a facelift. Who wants boring old Eighties coverage of games when we're entering the most exciting decade of this century. Here at The Games Machine, we've already got the technology for the nineties and now it's time to produce the magazine of the nineties. Next month's issue will have a COMPLETELY new look to it. You don't need us to tell you what any changes to the magazine will entail? Of course not.
  - We'll be covering everything of interest to anyone with a SPECTRUM, AMSTRAD, COMMODORE 64, ATARI ST, AMIGA, ARCHIMEDES, IBM PC, SEGA, NINTENDO, FC ENGINE, ATARI LYNX, GAMESHOP... this list will no doubt increase as the year goes on, but be it so cause that The Games Machine will, as the title suggests, be covering Entertainment as it relates to games machines.
  - Obviously games software will be given the biggest and best coverage, although that won't detract from the more interesting aspects of owning a computer. Graphics are exciting by themselves, sure computer-controlled music—well it's something that we won't be giving too much coverage, it'll be your ears accessible to everyone.

Owning a computer should be fun — whatever you want to do with it. Get next month's issue and experience the future of computer magazines now!

You'll have to wait till JANUARY 11  
for the next TGM experience.

On the other hand, the *lateral* movement of the head is a relatively *passive* movement, being the result of passive adjustment of the head to the body.
